Any combination of 2 different bands you want, VHF, UHF, and 700/800.
VHF & 700/800 or UHF & 700/800 or VHF & UHF.

Not all APXs have two bands. Some of the mobiles I have seen only had one RF board in them. Also the COH APX mobiles I saw had a connector for a GPS antenna.

All of the APX7000's are dual band, but having both bands enabled is an option. Using the term "APX" covers a large line of radios now (7000, 6000, 4000, 7500, 6500 to name few). ----- Original Message ----- From: "Josh Kaufman" To: HoustonScan@yahoogroups.com Sent: Friday, August 17, 2012 8:57:49 PM Subject: Re: [HoustonScan] starnet system Not all APXs have two bands. From: Josh W.
Topic: 26506 Message: 26524

Most all of the County system radios are, yes, but there could be the odd UHF/700/800 radio floating around.

All APX radios are built on a single RF board whether they're single-band or dual. The single-band variants of the 7000 handheld and 7500 mobile are the the 6000 and 6500, respectively, and the 6500 handheld is noticeably shorter than a 7000. All of the handhelds have GPS capability standard as well, and the mobiles should too. Bluetooth option boards are available too, but they restrict you to specific Motorola Bluetooth headsets.

http://blog.chron.com/newswatch/2012/08/united-flight-returns-to-houston-for-engine-problems/

This flight, United 1124, was up on 131.175 (ARINC En Route Service) with dispatch this morning at 12,000 feet after departure from Houston. They reported two independent circuit breaker failures in addition to another engine maintenance issue on the ground earlier in Houston. It seems that the dispatcher was not too concerned, however the pilot talked himself into returning due to the multiple unrelated electrical issues.

The "Bravo Charlie" channels still need to be identified.. they could
either be 44xxx talkgroups on 1A7 or simplex.

Are those coming across the 1-52 simulcast? Everything I've seen on the system 3 simulcasts has been in the 44xxx range. I guess those are going to be HPD talkgroups.

Look for the HFD "Charlie Bravo" talk groups to be in the range with HCMA 1-16.

Okay, I'm confused. HFD "Charlie Bravo" TGs will be in the range of what? I guess I mean, I don't recognize the abbreviation of "HCMA" on any of the systems we have going right now. ??

I can guess from the training I am hearing on a daily basis, on the 3D8 system these CBxx channels are active, but on what system?

Date: 2012-08-25 02:51:57 UTC
From: Louis Maag
Topic: 26568 Message: 26568

Back in June, Myles made note that he had heard Pct 5 Constables Disp 1 coming in on 719 (11504 on Analog). Apparently no one else commented on it at the time, but I have been hearing this most of the day today and occasionally yesterday. Anyone else getting other Pct Constables coming in on the TxWARN P25 system?

26572. 451.8 DCS 411 repeater

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-08-25 21:40:42 UTC
From: Eric C. Carlson
Topic: 26572 Message: 26572

I started receiving a repeater output on 451.8 DCS 411 as of 8/20. It is very weak for me downtown. It appears that Halliburton headquarters security switched to DCS 411 (used to be 218.1) and I can now pick it up (barely) downtown. It's broadcasting Morse code every 10-20 minutes but it doesn't appear to be a license callsign. What I've got is "NHRC/2" but someone better at Morse code may want to listen.

So.....How many Forum members Does It Take To Change A Light Bulb?

1 to change the light bulb and to post that the light bulb has been changed

14 to share similar experiences of changing light bulbs and how the
light bulb could have been changed differently

7 to caution about the dangers of changing light bulbs

1 to move it to the Do It Yourself section

2 to argue then move it to the General Discussion section

7 to point out spelling/grammar errors in posts about changing light bulbs

5 to flame the spell checkers

3 to correct spelling/grammar flames

6 to argue over whether it's "lightbulb" or "light bulb" ... another

6 to condemn those 6 as stupid

2 industry professionals to inform the group that the proper term is "lamp"

15 know-it-alls who claim they were in the industry, and that "light
bulb" is perfectly correct

19 to post that this forum is not about light bulbs and to please take
this discussion to a lightbulb forum

11 to defend the posting to this forum saying that we all use light
bulbs and therefore the posts are relevant to this forum

36 to debate which method of changing light bulbs is superior, where
to buy the best light bulbs, what brand of light bulbs work best for
this technique and what brands are faulty

7 to post URL's where one can see examples of different light bulbs

4 to post that the URL's were posted incorrectly and then post the
corrected URL's

3 to post about links they found from the URL's that are relevant to
this group which makes light bulbs relevant to this group

13 to link all posts to date, quote them in their entirety including
all headers and signatures, and add "Me too"

5 to post to the group that they will no longer post because they
cannot handle the light bulb controversy

4 to say "didn't we go through this already a short time ago?"

13 to say "do a Google search on light bulbs before posting questions
about light bulbs"

Do you have the custom tables (for rebanding) populated?

Kevin,

You are correct. I discovered immediately after entering that post that 1a7 wasn't tracking. Unfortunately, the recent addition of some TDMA TGs has apparently prompted Win500 to decide 1a7 is totally incompatible as a trunk system with the PSR-500. Just ducky! I had to manually pick 32 new CCs appropriate to my normal AO. What a pain in the right nut!

Yes Myles, I do prefer 1a7 to 2318. The audio sucks, but the signal density is nicer on this side of Houston.

Scott

I have changed all my lighting to LEDs. I did have to remortgage the house and sell most of my scanners, but I feel so much better about saving the enviroment.

Get onboard people. ...some sarcasm :-D

thanks Rusty!

I apologize for that, it appears the storm has been following me, sounds paranoid I know, but it's almost that bad.

When I was in Daytona/St. Augistine it was coming right up the middle of the peninsula; I get to Marianna, and it's shifted to come in somewhere close to Pensacola.
Next I make it to Slidell and I wake up the next morning and it's shifted to anywhere between Mobile, Al and New Orleans, La. Tonight I make it home check my email and see this.
This kinda sucks. LOL

I heard some air-to-air on 252.8 today. I didn't catch much but one brief mention of satcom.

Its now Hurricane Isaac.

RECONNAISSANCE DATA INDICATE ISAAC FINALLY ACHIEVES HURRICANE
STATUS...

REPORTS FROM AN AIR FORCE RESERVE HURRICANE HUNTER AIRCRAFT
INDICATE THAT MAXIMUM WINDS ASSOCIATED WITH ISAAC HAVE INCREASED
TO 75 MPH...120 KM/H. ON THIS BASIS...ISAAC IS BEING UPGRADED TO
A HURRICANE.

SUMMARY OF 1120 AM CDT...1620 UTC...INFORMATION

Yes, but each and every use of the UHF Tac channels brought forth an instruction to move to the 800 MHz channels from OEC.

26612. 166.625 [CSQ]

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-08-29 00:00:43 UTC
From: Eric C. Carlson
Topic: 26612 Message: 26612

I'm looking for an ID on the car-to-car chit chat on 166.625 [CSQ] simplex that just went through the downtown area. This is a new frequency for me. They were reminiscing about going up the downtown skyscrapers as kids and talking about all the oil wells down here and how they won't let them build that in Colorado. They are headed southbound Highway 288 to Beltway 8 west. They're staying on the service road because they only have a mile to go after that.

You talking about the dead carrier? I'm getting it not very strong near I-45 and the South Beltway. Guessing it is to the north somewhere to be affecting the repeater. Just got some airplane flutter which would support that. Signal probably just bounced off a plane around Hobby.

I'm not getting a PL on the signal.

Aren't most of those folks using the 800 system?

Yes, Its been Dead Carrier for 3 days. VHF is used by dispatch for all the departments which is patched to 800. Ground personal primarily use 800 but can use VHF if needed, Interoperability. VHF mostly used for station alerting which is the problem. I really need to figure out where its coming from. This repeater input is useless until then. Thanks

That site and frequency are on Radio Reference as Anahuac. I can't pick it up from my house in League City.

League City loud and clear here. Not seeing a license for this though.

Anahuac is weak and not decoding.

Still no Pasadena, High Island, Humble or Waller/Hempstead. Don’t see licenses for Pasadena or Humble.

Some gaps in the site numbers: 2,3,4,12,29,30

Also have never heard site 7 Hobby airport.

26631. Label maker

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-08-31 02:27:27 UTC
From: Kevin Chessher
Topic: 26631 Message: 26631

If you like to label your radios/coax/antennas/whatever and have one of the label makers on the linked website you can trade it in for a fancy-dancy new one. I was given an old beat-up one that was on the list and now my FREE one is on the way.

http://www.homecontrols.com/Free-Rhino5200

Not a bad deal.

Pasadena will probably show up with a site number under Houston's RFSS 3
layer. No idea what their implementation schedule is looking like, but
I'm surprised it's not on the air yet.
On a side note, that UHF antenna sticking off the side of the new tower
is another mystery.

Yes, Its been Dead Carrier for 3 days. VHF is used by dispatch for all the departments which is patched to 800. Ground personal primarily use 800 but can use VHF if needed, Interoperability. VHF mostly used for station alerting which is the problem. I really need to figure out where its coming from. This repeater input is useless until then. Thanks

You talking about the dead carrier? I'm getting it not very strong near I-45 and the South Beltway. Guessing it is to the north somewhere to be affecting the repeater. Just got some airplane flutter which would support that. Signal probably just bounced off a plane around Hobby.

I'm not getting a PL on the signal.

Aren't most of those folks using the 800 system?

Hint, hint ...

If someone would just give a definitive set of information (like actual RSS / Site# and frequency for CCh) instead of having the title of the thread say one thing and the information in the thread a confusing set of data, it might happen. Even if no one bothers to submit it. 8^)

From: Sandyj
Topic: 12498 Message: 26662

about two months ago i ask for any one who fix/repair tri bander radio

A kenwood 746 and i can not find the phone # for them could you

please send me the phone # again as i am looking for a PRS800

scanner from them as well . thank you in advance

should any one have one of these radios and it is not working you

will not get it fixed unless you are really lucky they do not make it

any more nor do they support it, As best as i have been told .

so if anyone knows who has the parts for it and can fix it as well please

e-mail on that.

sandyj@... KB8KKD

taint right - taint wrong - it jest is

From: elentz1
Topic: 579 Message: 26672

Sounds good to me. I would like for things to stay just as they are with all communications in the open. It's just like the old days when you could hear the dispatcher and units having a normal conversation. During the fire today I thought I heard one of the HFD channels go encrypted and happened to be driving thru downtown and didn't have a chance to look at the radio and see which channel it was.

The Houston Public Works is one of the few radio signals out here north of Crosby that I can hear inside the house with just the antenna on the radio. Tech-shield does wonders for radio signals inside the house.

26674. PSR 900

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-09-03 17:22:24 UTC
From: elentz1
Topic: 26674 Message: 26674

Wonder if this radio will come to be and also be useful in the Houston Area.....

PSR 900 Digital base/mobile remote head

The GRE PSR-900 will offer amazing capability along with easy of use. The expected frequency coverage is: 25-54, 108-136.99, 137-174, 216-512, 764-781.99, 791-798.99, 806-960 (excluding cellular bands) and 1240-1300 MHz. This radio comes with a 2GB SD card preloaded with US and Canadian public service frequencies. You automatically program your scanner by merely entering your zip code or city. It handles analog and digitals systems including APCO 25. This device has not been approved by the F.C.C.Yet. Pricing and availability will be posted when announced by GRE.

I fiddled around with one at the Plano Hamfest earlier this summer.
Basically it's a mobile version of the PSR800 with a remotable control
head.. and no, it won't decode pure Phase II.

Someone needs to get on the ball ! Uniden has been pretty quite lately (except for the HP-1), especially in their true mobile units, I wonder if they have something up their sleeve with pure Phase II ? hopefully the best of both worlds like some type of hybrid of the 996/HP-1.

The software vendors/developers (all of them) have to change the way they exclude systems. Instead of having a list of things they allow, they should change it to a list of excluded types (like Passport, OpenSky, etc.) instead of always having to change the software to include a new one when added to the RadioReference DB. I would suggest you contact Don Starr in this instance and ask for an update to the software.

> They still have the problem with background noise over riding the voice. IMHO, the sound background noise makes the folks in the fire, or in this case the fire boats, almost impossible to understand; of course, I am not a fireman so some of that may be just me, but to me the digital is so clear the background noise is very clear until they speak and then if the voice is not strong enough then you have a mish-mash of background and voice. I understand perfectly that if the voice is strong enough, the noise canceling will kick in, but when the noise and the voice are almost the same level, neither wins that contest.

26703. Re: [HoustonScan] HFD

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-09-06 03:06:09 UTC
From: gjhamilton@earthlink.net
Topic: 579 Message: 26703

I emailed the people at the city regarding the new system. And believe it or not I received a phone call back. I was told that when the change over is made it will be broadcast in fdma at first. They said that their schedule for switching to tdma was on the same timeline as the scanner manufacturers. I was also informed that everything for the most part will be broadcast in the clear.

Well it sounds clear...good is another matter.

They still have the problem with background noise over riding the voice. IMHO, the sound background noise makes the folks in the fire, or in this case the fire boats, almost impossible to understand; of course, I am not a fireman so some of that may be just me, but to me the digital is so clear the background noise is very clear until they speak and then if the voice is not strong enough then you have a mish-mash of background and voice. I understand perfectly that if the voice is strong enough, the noise canceling will kick in, but when the noise and the voice are almost the same level, neither wins that contest.

Currently they are simulcasting on the analog channels on Tac 8 along with DA8. But there is something holding the channel open after almost every transmission. Not so good for folks on trunking side of that.

People collect the strangest things. But you have noticed even modern
movies continue to show 10-channel crystal controlled scanners in use?

From: Lou
Topic: 26716 Message: 26722

Don't get your hopes up. I mean, yes today they are on UHF, but if you have been monitoring, Tac 7 has been occupied on and off all day long with RadioTechs working on making sure the radios are working and that they are patching properly between UHF and the trunking system.

Whatever the "alignment" difficulty was, I'm betting that it doesn't keep them on the UHF radios for very long. And remember, after December 31st they can't use the UHF radios at all.

Lou

Cutbacks. The airlines were responsible for checking claim tags. Like peanuts and pillows it's an expense. Apparently the cost of losing luggage is less than the cost to check claim tags.

26732. crystal controlled radios

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-09-07 11:31:54 UTC
From: Sandyj
Topic: 26732 Message: 26732

I would really like to see some company begin to make crystal controlled radios again

using peanut tubes for finals as well as receive and reed controlled pls .

the only problem I have today with the radios I have that are crystaled , is that there is no one

making crystal any more - and there are very few people left that no how to nest them.

the last two companies I heard of that make crystal are in Oklahoma and in Florida.

I do not even know if they are still in business any more.

I still have several radios still working but crystal finding is the problem. those you find at a
ham fest are most of the time are not workable or are the wrong frequencies.

most of the time if you find crystals you have to send the radio to the company for a burn in

as well as nesting. but the effort is really worth the price in radio usage. as real radios glow in the dark.

taint right - taint wrong - it jest is

There was a time not very long ago that the police departments in our largest cities continued to operate on conventional frequencies. This included NYC, LA, Chicago, Houston, and Boston. I really haven't kept up, but during my last visit to Chicago (2007) and Boston (2011) they both still used UHF. Additionally as police departments in the suburbs switched to trunked systems, Boston PD was taking their conventional frequencies. I was in San Francisco on the late 90s and they were still using some VHF-low frequencies. I saw their motorcycle cops and the antennas looked like they'd catch a gust of wind and flip the bike over. They switched to a trunked system shortly after.

I don't really have a point other than if conventional is good enough for the NYPD then why does some suburban city of 40,000 need a top of the line digital trunked system?

26738. Re: [HoustonScan] HPD switch

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-09-07 18:50:00 UTC
From: Josh W.
Topic: 26735 Message: 26738

Boston and Chicago are still rocking 460 MHz UHF. NYPD requested a narrowbanding waiver for their 470 MHz system but are in the process of building out a 700 MHz trunk. LAPD is still on 506/484 MHz P25 but with T-band slated to go away in 8-9 years who knows what they'll do (note of interest: the wide-area public safety trunk under construction in metro LA is also T-band.) The winds of change are blowing...

As far as metro Houston goes, HPD/HFD migrating away from UHF will open up a lot of channels for the volunteer fire departments down the road.

Pct 3 constables were still using 37.180 in the early ‘80’s.

They already had hi-band to talk to SO, so not sure when constables dropped lo-band.

Seems like we've been down this road before. Hardly none of HPD/HFD's equipment is narrow bandable they HAD to do something. Most of their infrastructure is so old they can't get parts for it. HFD has several channels out of service due to parts being NLA. I personally would feel a lot safer if my PS agency could communicate, even if it's not worldwide. And I guess no ham anywhere uses P25, DStar, MotoTRBO, etc?

Motorola crap? Would you rather they buy Baofeng?

From: gjhamilton@earthlink.net
Topic: 579 Message: 26754

They are having a big pow wow down at the City next week since someone finally realized that no cars are going to be towed after the switch. We will see how things shake out.

That should be interesting. Whether you like wreckers or not they do serve a purpose.

If I was in charge I would narrowband one of the current frequencies, patch it to the trunked system and make it the wrecker channel. When you need a wrecker you switch to that channel. Not perfect, but it's better than nothing.

I too would also keep one of the UHF repeaters as a citywide wrecker channel and put it in the radios. But instead of officers having to go off the system and switch to it, I would just have them normally GB for a wrecker on their primary and have dispatch echo the GB on the wrecker channel. It's just a mouse click for dispatch. They already echo it on primary. Why not just do it on a wrecker channel. Problem solved. The only negative with that is officers can't directly yell at wrecker drivers over the air. If they really wanted to, they could take the time to switch to the channel. I emailed the people at the city regarding the new system. And believe it or not I received a phone call back. I was told that when the change over is made it will be broadcast in fdma at first. They said that their schedule for switching to tdma was on the same timeline as the scanner manufacturers. I was also informed that everything for the most part will be broadcast in the clear.

HFD

Well it sounds clear...good
is another matter.

They still have the problem
with background noise over riding the voice. IMHO, the sound background noise makes the folks in the fire, or in this case the fire boats, almost impossible to understand; of course, I am not a fireman so some of that may be just me, but to me the digital is so clear the background noise is very clear until they speak and then if the voice is not strong enough then you have a mish-mash of background and voice. I understand perfectly that if the voice is strong enough, the noise canceling will kick in, but when the noise and the voice are almost the same level, neither wins that
contest.

Currently they are
simulcasting on the analog channels on Tac 8 along with DA8. But there is something holding the channel open after almost every transmission. Not so good for folks on trunking side of that.

From: Kevin Chessher
Topic: 579 Message: 26760

With the way current scanners decode simulcast I'd rather see UHF, but that's just me.

It's just a mouse click for dispatch. They already echo it on primary. Why not just do it on a wrecker channel. Problem solved.
>>
>> The only negative with that is officers can't directly yell at wrecker drivers over the air. If they really wanted to, they could take the time to switch to the channel.

>> They still have the problem with background noise over riding the voice. IMHO, the sound background noise makes the folks in the fire, or in this case the fire boats, almost impossible to understand; of course, I am not a fireman so some of that may be just me, but to me the digital is so clear the background noise is very clear until they speak and then if the voice is not strong enough then you have a mish-mash of background and voice. I understand perfectly that if the voice is strong enough, the noise canceling will kick in, but when the noise and the voice are almost the same level, neither wins that contest.

I remember when constable pct 5 was on VHF and they transferred over to trunking using STX radios. I don't remember this many issues though.

26777. HPD new radio system

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-09-16 00:19:39 UTC
From: Bill Brown
Topic: 26777 Message: 26777

Sorry this took so long Wanted to make sure everything that we talked about worked out ok

First I want to thank everyone from the City of Houston and HPD for taking time to meet with us.

The City wants to work with the community to make sure that tow trucks, scanner users, media, and other smaller agencies will be able to continue to monitor all HPD dispatch channels and HFD A-1.

Without getting too technical ....

All of these channels will be retransmitted real time on channels that can be monitored with a P-25 700 - 800 MHz trunking scanner such as the Uniden HP-1, GRE PSR-600/PSR-500, or PSR 800 and I'm sure there are others as well

We got back together to test the proposed solution Friday afternoonusing a PSR-500 scanner. All went very well. Some of you may have heard the testing

The city will release a list of TGs shortly after the complete system test is completed. Most likely first part of November so that everyone can be ready before the Dec. 31 deadline.

If anyone has any questions you can email me atradiobill66@....

Also you can look for an artical in the Houston Chronicle Monday about system testing.

The signal loss is due to the wrecker drivers using a special radio called the Molotora Gontor. This radio is specifically designed to suck the signals from a trunking system so that /\/\ can sell an upgrade to the system. See the following link.....
http://www.repeater-builder.com/molotora/gontor/gontor.html

I seem to remember someone telling Harris County that a two-way shop in town had some sort of device that would take down their system. Wish I could remember his name.

A little bit of humor for everyone.

An Overview of the
Molotora® Gontor®
Full-Featured Radio
By Robert W. Meister WA1MIK

I've known of this old radio for quite a while and decided today is a good time to describe it to the radio community.

General Specifications:

The Molotora Gontor is based on the proprietary Gonculator device that was first developed in Germany in the mid-1940s. It's a low-power radio (under 100 watts) that covers all frequencies you'd ever want to use it on, even mirror image, negative, and imaginary / complex frequencies. Type-accepted and type-approved cognitive recognition techniques allow it to demodulate all signals on all frequencies simultaneously. Its built-in variometer allows it to use any conductive material as an antenna, from full-length steel towers to wet, salty egg noodles. A Mallory Inductuner is used to electronically adjust the apple iPi network used in the transponder assembly. The radio also includes highly accurate wattmeter that can measure forward, reflected, inner-conductor, outer-conductor, incidental, and re-radiated power. It will even measure power of other transmitters up to 30 feet away. The TBQ antenna connector will readily accept any size coax from RG174 to 6 inch hard-line. The radio's cover is held in place by several triple-bitted, five-sided locks, each keyed differently, one on each corner, assuring the ultimate in security. The radio can be trunk, dash, or console mounted, duct-taped under an airplane, or easily held in two hands.

But wait, there's more! If you read this within the next 10 minutes, we'll double your fun! The Gontor can even be used as a stand-alone repeater. It has a built-in Vari-gain, hybrid ring-tone, auto-tuning duplexer, based on the international Gld / Slvr / Brnz medallion technology. This allows it to handle any split or offset and still provide over 200dB isolation, making it ideal for law enforcement and public safety triplex operation. All voice transmissions made by users will be heard by anyone within earshot.

Transmitter and Receiver Capabilities:

It has the ability to simultaneously do Amplitude Modulation (AM) up to +/- 150% symmetrical or asymmetrical depth, single, double, and triple sideband with suppressed or reduced carrier, Frequency Modulation (FM) up to +/- 200 kHz deviation, and even Phase Modulation (PM) so it's compatible with all existing one-way, two-way, and three-way radio equipment made by GE, Motorola, Yaesu, Kenwood, Johnson, Icon, Alinco, etc. Privacy-Plus, SecureNet, Trunking, LTR, ZOWIE, TRBO, GRBL, APCO, P25, SPECTRE, and secure 512-bit encryption protocols are fully supported, however the radio is not certified for use outside this country, due to the Remulak zurls and other software patents. CW is sent with true carrier on/off (high-voltage) switching, and a spark-gap filter removes all chirp and other desirable signals. A Variolosser circuit maintains the level under all conditions.

The frequency response of both the transmitter and receiver is 0.1 Hz to 100 kHz, so it can easily handle sub-audible (PL, CTCSS, DPL, or DCS) coding schemes as well as audible tone signaling (DTMF, tone-burst, noise-burst, etc). It can even encode and decode any and all of these simultaneously. The built-in DTMF decoder handles all 17 possible two-tone digits. It can also handle pulse dialing and SELCAL decoding at up to 100 Baud. A seven-speed Borg-Warmer transmission handles Baudot and ASCII data formats. Tall, blond, and handsome audio inputs are provided for easy wireless-line integration into any existing communications system. A GPS-disciplined, micro-miniature, cesium beam master oscillator insures the radio will be on any frequency at all times. The patented Merkeljammer circuit uses PermaQuay filters to remove all pulse-type noise interference picked up by the receiver. A heuristic audio filter will even mute the audio and retune the receiver to something better, when unintelligent signals are encountered.

Reproductive Devices:

The built-in three-way speaker faces all directions equally well and easily reproduces everything the receiver can hear, including noise and all variations of repeater courtesy tones, beeps, grunts, twangs, burps, etc. For those acoustically-challenged owners, an external 6,000 watt-per-channel amplifier is available from Crown International. See the 200kB PDF file data sheet here. The rare-earth, liquefied, natural unobtanium microphone will pick up all noises emanating from your body. It has a built-in "release-to-listen" button that doesn't violate the often-duplicated and patented "Push-To-Talk" system, allowing royalty-free use of every bit of electromagnetic spectrum. That well-known German scientist, Dr. Ruth Westheimer, seductively designed these two devices for maximum pleasure and enjoyment from your QSO partner. The neon-colored "Magic-Eye" tuning indicator automatically displays receive and transmit audio levels and the direction they came from, and can be configured to display slow-scan, fast-scan, analog, or digital video signals. The MPEG5000 decoder can handle no-def, high-def, noun, verb, and synonym signals. A separate satellite receiving antenna (with down-converter) and universal decoder can also be attached. I have also heard rumors about a universal translator option (SP-UFP), but I have no idea why anyone would need that in this day and age.

Miscellaneous Details and Features:

The rear-panel display uses 9-character nixie tubes (the digits 6 and 9 use the same pattern but are shown in complementary colors). The front panel is ergonomically designed and each of the unlabeled buttons activates a random function. This ensures maximum enjoyment out of the radio. The user manual, when it was available, cost a mere $3,500AU. It is, unfortunately, no longer available. I could post a PDF copy, but it's a big file, nearly 100TB, so you'll need a high-speed sub-space connection to even think about downloading it.

An optional packet and expedition cluster detector is available. It will display the transmit, intermediate, and receive frequencies of all distant contest stations. APRS is automatically provided with the radio's exact location thanks to the built-in GPS receiver. The user's call sign is automatically recognized and included in every location report.

Standard DC and tone remote control is built in, using twist-lock XLR connectors, arranged in an aneroid pattern. There's even a phone patch with a comprehensive feedback and echo elimination system and an automatic "under" detector.

Programming and Power Options:

The radio is programmed using a Teletype Model 15 (Baudot) machine with a 130V, 60mA D.C. current loop interface, however only the numbers 2 through 9 are accepted for frequency input. Ordinary HTML codes are used, so you don't need to steal proprietary programming software or even obtain an RSS license, which is necessary for some other radios. Just like your luggage, the combination 12345 must be entered as the device access code. The programming data is stored in a Signetics 25120 EEPWOM chip. See the 80kB PDF file data sheet here. Unlike most of the Japanese radios that limit your labels to perhaps eight characters, you can label each channel in the Gontor by using up to 99.4% of available memory. An easily replaced 67.5V "B" battery provides memory retention for the life of the battery or the original owner, whichever expires last. An optional 22.5V "C" battery provides bias for those users who like to have a lot of political conversations. A built-in 33VDC voltage-doubling, electron-coupled (no ground required) power converter allows vehicular operation. This is far more universal than the railroad radios ever offered.

A Jedi-compatible accessory connector can be configured to charge a second-generation light epee, ensuring that darkons are eliminated from nearby fluorescent tubes.

Alternator and power line noise is completely eliminated by a 4.7 Faraday shielded, water-soluble flux capacitor. This is coupled to the audio circuit's Eustachian tubes for maximum intelligence.

Photographs:

I'd love to provide a better photo but every time I try to take one using the camera's flash, the radio changes color and the front panel lettering moves around.

Newly-Discovered Features and Options:

To bring this unit into the 21st century, the manufacturer has added Blew-Tuuth connectivity for you and a dozen of your closest friends. Any compatible device within several miles will automatically be authenticated to allow full-triplex communication. No need to use that local repeater as an intercom system.

An iPod-like audio and video transcription device with seven zettabytes of storage allows you to save and replay several lifetime's worth of conversations, idle chit-chat, woodpecker interference, and 75-meter jamming, using a proprietary 666-bit security and self-correcting parity algorithm based on the nine's complement number system.

A touch-sensitive screen, running the latest Doors operating system software, is also available. Unlike the more popular Windows system, Doors doesn't need to be updated and/or rebooted every month; just leave it ajar and it takes care of itself by periodically slamming all nearby telephones. Using the keypad application, you can enter important information, which can be sent to other Gontor users at the speed of sound, saving your precious shared cellphone minutes for your teenagers to waste while driving.

Credits and Acknowledgements:

Molotora, Gontor, PL, DPL, and a bunch of other terms might be trademarks of their respective companies. They have been used without permission. Do you think I really care about copyrights?

This radio was eventually used as the basis for the Gonset Communicator and the Motorola Syntor.

The Motorola logo is commonly called a batwing. The Molotora logo can therefore be officially called a dingbat. Bats do hang upside down in caves and belfrys. Belfrys have bells. Bells go ding. QED.

This article has been carefully checked for spelling and grammatical errors. There are none. If you think you found a mistake, just keep reading it until it makes sense. Just like Microsoft technical support, everything stated herein is absolutely correct but completely useless.

The United States Department of Extreme Mismanagement and Homeland Insecurity and the Federal Candy Company approved the release of this information.

>The Molotora Gontor is based on the proprietary Gonculator device that was first developed in Germany in the mid-1940s. It's a low-power radio (under 100 watts) that covers all frequencies you'd ever want to use it on, even mirror image, negative, and imaginary / complex frequencies. Type-accepted and type-approved cognitive recognition techniques allow it to demodulate all signals on all frequencies simultaneously. Its built-in variometer allows it to use any conductive material as an antenna, from full-length steel towers to wet, salty egg noodles. A Mallory Inductuner is used to electronically adjust the apple iPi network used in the transponder assembly. The radio also includes highly accurate wattmeter that can measure forward, reflected, inner-conductor, outer-conductor, incidental, and re-radiated power. It will even measure power of other transmitters up to 30 feet away. The TBQ antenna connector will readily accept any size coax from RG174 to 6 inch hard-line. The radio's cover is held in place by several triple-bitted, five-sided locks, each keyed differently, one on each corner, assuring the ultimate in security. The radio can be trunk, dash, or console mounted, duct-taped under an airplane, or easily held in two hands.
>
>But wait, there's more! If you read this within the next 10 minutes, we'll double your fun! The Gontor can even be used as a stand-alone repeater. It has a built-in Vari-gain, hybrid ring-tone, auto-tuning duplexer, based on the international Gld / Slvr / Brnz medallion technology. This allows it to handle any split or offset and still provide over 200dB isolation, making it ideal for law enforcement and public safety triplex operation. All voice transmissions made by users will be heard by anyone within earshot.
>
>Transmitter and Receiver Capabilities:
>
>It has the ability to simultaneously do Amplitude Modulation (AM) up to +/- 150%

symmetrical or asymmetrical depth, single, double, and triple sideband with suppressed or reduced carrier, Frequency Modulation (FM) up to +/- 200 kHz deviation, and even Phase Modulation (PM) so it's compatible with all existing one-way, two-way, and three-way radio equipment made by GE, Motorola, Yaesu, Kenwood, Johnson, Icon, Alinco, etc. Privacy-Plus, SecureNet, Trunking, LTR, ZOWIE, TRBO, GRBL, APCO, P25, SPECTRE, and secure 512-bit encryption protocols are fully supported, however the radio is not certified for use outside this country, due to the Remulak zurls and other software patents. CW is sent with true carrier on/off (high-voltage) switching, and a spark-gap filter removes all chirp and other desirable signals. A Variolosser circuit maintains the level under all conditions.
>
>The frequency response of both the transmitter and receiver is 0.1 Hz to 100 kHz, so it can easily handle sub-audible (PL, CTCSS, DPL, or DCS) coding schemes as well as audible tone signaling (DTMF, tone-burst, noise-burst, etc). It can even encode and decode any and all of these simultaneously. The built-in DTMF decoder handles all 17 possible two-tone digits. It can also handle pulse dialing and SELCAL decoding at up to 100 Baud. A seven-speed Borg-Warmer transmission handles Baudot and ASCII data formats. Tall, blond, and handsome audio inputs are provided for easy wireless-line integration into any existing communications system. A GPS-disciplined, micro-miniature, cesium beam master oscillator insures the radio will be on any frequency at all times. The patented Merkeljammer circuit uses PermaQuay filters to remove all pulse-type noise interference picked up by the receiver. A heuristic audio filter will even mute the audio and retune the receiver to something better, when unintelligent signals are encountered.
>
>Reproductive Devices:
>
>The built-in three-way speaker faces all directions equally well and easily reproduces everything the receiver can hear, including noise and all variations of repeater courtesy tones, beeps, grunts, twangs, burps, etc. For those acoustically-challenged owners, an external 6,000 watt-per-channel amplifier is available from Crown International. See the 200kB PDF file data sheet here. The rare-earth, liquefied, natural unobtanium microphone will pick up all noises emanating from your body. It has a built-in "release-to-listen" button that doesn't violate the often-duplicated and patented "Push-To-Talk" system, allowing royalty-free use of every bit of electromagnetic spectrum. That well-known German scientist, Dr. Ruth Westheimer, seductively designed these two devices for maximum pleasure and enjoyment from your QSO partner. The neon-colored "Magic-Eye" tuning indicator automatically displays receive and transmit audio levels and the direction they came from, and can be configured to display slow-scan, fast-scan, analog, or digital video signals. The MPEG5000 decoder can handle no-def, high-def, noun, verb, and synonym signals. A separate satellite receiving antenna (with down-converter) and universal decoder can also be attached. I have also heard rumors about a universal translator option (SP-UFP), but I have no idea why anyone would need that in this day and age.
>
>Miscellaneous Details and Features:
>
>The rear-panel display uses 9-character nixie tubes (the digits 6 and 9 use the same pattern but are shown in complementary colors). The front panel is ergonomically designed and each of the unlabeled buttons activates a random function. This ensures maximum enjoyment out of the radio. The user manual, when it was available, cost a mere $3,500AU. It is, unfortunately, no longer available. I could post a PDF copy, but it's a big file, nearly 100TB, so you'll need a high-speed sub-space connection to even think about downloading it.

>
>An optional packet and expedition cluster detector is available. It will display the transmit, intermediate, and receive frequencies of all distant contest stations. APRS is automatically provided with the radio's exact location thanks to the built-in GPS receiver. The user's call sign is automatically recognized and included in every location report.

A little bit of humor for everyone.

An Overview of the
Molotora® Gontor®
Full-Featured Radio
By Robert W. Meister WA1MIK

I've known of this old radio for quite a while and decided today is a good time to describe it to the radio community.
General Specifications:
The Molotora Gontor is based on the proprietary Gonculator device that was first developed in Germany in the mid-1940s. It's a low-power radio (under 100 watts) that covers all frequencies you'd ever want to use it on, even mirror image, negative, and imaginary / complex frequencies. Type-accepted and type-approved cognitive recognition techniques allow it to demodulate all signals on all frequencies simultaneously. Its built-in variometer allows it to use any conductive material as an antenna, from full-length steel towers to wet, salty egg noodles. A Mallory Inductuner is used to electronically adjust the apple iPi network used in the transponder assembly. The radio also includes highly accurate wattmeter that can measure forward, reflected, inner-conductor, outer-conductor, incidental, and re-radiated power. It will even measure power of other transmitters up to 30 feet away. The TBQ antenna connector will readily accept any size coax from RG174 to 6 inch hard-line. The radio's cover is held in place by several triple-bitted, five-sided locks, each keyed differently, one on each corner, assuring the ultimate in security. The radio can be trunk, dash, or console mounted, duct-taped under an airplane, or easily held in two hands.
But wait, there's more! If you read this within the next 10 minutes, we'll double your fun! The Gontor can even be used as a stand-alone repeater. It has a built-in Vari-gain, hybrid ring-tone, auto-tuning duplexer, based on the international Gld / Slvr / Brnz medallion technology. This allows it to handle any split or offset and still provide over 200dB isolation, making it ideal for law enforcement and public safety triplex operation. All voice transmissions made by users will be heard by anyone within earshot.
Transmitter and Receiver Capabilities:

It has the ability to simultaneously do Amplitude Modulation (AM) up to +/- 150% symmetrical or asymmetrical depth, single, double, and triple sideband with suppressed or reduced carrier, Frequency Modulation (FM) up to +/- 200 kHz deviation, and even Phase Modulation (PM) so it's compatible with all existing one-way, two-way, and three-way radio equipment made by GE, Motorola, Yaesu, Kenwood, Johnson, Icon, Alinco, etc. Privacy-Plus, SecureNet, Trunking, LTR, ZOWIE, TRBO, GRBL, APCO, P25, SPECTRE, and secure 512-bit encryption protocols are fully supported, however the radio is not certified for use outside this country, due to the Remulak zurls and other software patents. CW is sent with true carrier on/off (high-voltage) switching, and a spark-gap filter removes all chirp and other desirable signals. A Variolosser circuit maintains the level under all conditions. The frequency response of both the transmitter and receiver is 0.1 Hz to 100 kHz, so it can easily handle sub-audible (PL, CTCSS, DPL, or DCS) coding schemes as well as audible tone signaling (DTMF, tone-burst, noise-burst, etc). It can even encode and decode any and all of these simultaneously. The built-in DTMF decoder handles all 17 possible two-tone digits. It can also handle pulse dialing and SELCAL decoding at up to 100 Baud. A seven-speed Borg-Warmer transmission handles Baudot and ASCII data formats. Tall, blond, and handsome audio inputs are provided for easy wireless-line integration into any existing communications system. A GPS-disciplined, micro-miniature, cesium beam master oscillator insures the radio will be on any frequency at all times. The patented Merkeljammer circuit uses PermaQuay filters to remove all pulse-type noise interference picked up by the receiver. A heuristic audio filter will even mute the audio and retune the receiver to something better, when unintelligent signals are encountered.

Reproductive Devices:

The built-in three-way speaker faces all directions equally well and easily reproduces everything the receiver can hear, including noise and all variations of repeater courtesy tones, beeps, grunts, twangs, burps, etc. For those acoustically-challenged owners, an external 6,000 watt-per-channel amplifier is available from Crown International. See the 200kB PDF file data sheet here. The rare-earth, liquefied, natural unobtanium microphone will pick up all noises emanating from your body. It has a built-in "release-to-listen" button that doesn't violate the often-duplicated and patented "Push-To-Talk" system, allowing royalty-free use of every bit of electromagnetic spectrum. That well-known German scientist, Dr. Ruth Westheimer, seductively designed these two devices for maximum pleasure and enjoyment from your QSO partner. The neon-colored "Magic-Eye" tuning indicator automatically displays receive and transmit audio levels and the direction they came
from, and can be configured to display slow-scan, fast-scan, analog, or digital video signals. The MPEG5000 decoder can handle no-def, high-def, noun, verb, and synonym signals. A separate satellite receiving antenna (with down-converter) and universal decoder can also be attached. I have also heard rumors about a universal translator option (SP-UFP), but I have no idea why anyone would need that in this day and age.

Miscellaneous Details and Features:

The rear-panel display uses 9-character nixie tubes (the digits 6 and 9 use the same pattern but are shown in complementary colors). The front panel is ergonomically designed and each of the unlabeled buttons activates a random function. This ensures maximum enjoyment out of the radio. The user manual, when it was available, cost a mere $3,500AU. It is, unfortunately, no longer available. I could post a PDF copy, but it's a big file, nearly 100TB, so you'll need a high-speed sub-space connection to even think about downloading it.

An optional packet and expedition cluster detector is available. It will display the transmit, intermediate, and receive frequencies of all distant contest stations. APRS is

automatically provided with the radio's exact location thanks to the built-in GPS receiver. The user's call sign is automatically recognized and included in every location report. Standard DC and tone remote control is built in, using twist-lock XLR connectors, arranged in an aneroid pattern. There's even a phone patch with a comprehensive feedback and echo elimination system and an automatic "under" detector.

Programming and Power Options:

The radio is programmed using a Teletype Model 15 (Baudot) machine with a 130V, 60mA D.C. current loop interface, however only the numbers 2 through 9 are accepted for frequency input. Ordinary HTML codes are used, so you don't need to steal proprietary programming software or even obtain an RSS license, which is necessary for some other radios. Just like your luggage, the combination 12345 must be entered as the device access code. The programming data is stored in a Signetics 25120 EEPWOM chip. See the 80kB PDF file data sheet here. Unlike most of the Japanese radios that limit your labels to perhaps eight characters, you can label each channel in the Gontor by using up to 99.4% of available memory. An easily replaced 67.5V "B" battery provides memory retention for the life of the battery or the original owner, whichever expires last. An optional 22.5V "C" battery provides bias for those users who like to have a lot of political conversations. A built-in 33VDC voltage-doubling, electron-coupled (no ground required) power converter allows vehicular operation. This is far more universal than the railroad radios ever offered.

A Jedi-compatible accessory connector can be configured to charge a second-generation light epee, ensuring that darkons are eliminated from nearby fluorescent tubes.

Alternator and power line noise is completely eliminated by a 4.7 Faraday shielded, water-soluble flux capacitor. This is coupled to the audio circuit's Eustachian tubes for maximum intelligence.

Photographs:

I'd love to provide a better photo but every time I try to take one using the camera's flash, the radio changes color and the front panel lettering moves around.

Newly-Discovered Features and Options:

To bring this unit into the 21st century, the manufacturer has added Blew-Tuuth connectivity for you and a dozen of your closest friends. Any compatible device within several miles will automatically be authenticated to allow full-triplex communication. No need to use that local repeater as an intercom system.

An iPod-like audio and video transcription device with seven zettabytes of storage allows you to save and replay several lifetime's worth of conversations, idle chit-chat, woodpecker interference, and 75-meter jamming, using a proprietary 666-bit security and self-correcting parity algorithm based on the nine's complement number system.

A touch-sensitive screen, running the latest Doors operating system software, is also available. Unlike the more popular Windows system, Doors doesn't need to be updated and/or rebooted every month; just leave it ajar and it takes care of itself by periodically slamming all nearby telephones. Using the keypad application, you can enter important information, which can be sent to other Gontor users at the speed of sound, saving your precious shared cellphone minutes for your teenagers to waste while driving.

Credits and Acknowledgements:

Molotora, Gontor, PL, DPL, and a bunch of other terms might be trademarks of their respective companies. They have been used without permission. Do you think I really care about copyrights?

This radio was eventually used as the basis for the Gonset Communicator and the Motorola Syntor.

The Motorola logo is commonly called a batwing. The Molotora logo can therefore be officially called a dingbat. Bats do hang upside down in caves and belfrys. Belfrys have

bells. Bells go ding. QED.
This article has been carefully checked for spelling and grammatical errors. There are none. If you think you found a mistake, just keep reading it until it makes sense. Just like Microsoft technical support, everything stated herein is absolutely correct but completely useless.
The United States Department of Extreme Mismanagement and Homeland Insecurity and the Federal Candy Company approved the release of this information.

> General Specifications:
> The Molotora Gontor is based on the proprietary Gonculator device that was first developed in Germany in the mid-1940s. It's a low-power radio (under 100 watts) that covers all frequencies you'd ever want to use it on, even mirror image, negative, and imaginary / complex frequencies. Type-accepted and type-approved cognitive recognition techniques allow it to demodulate all signals on all frequencies simultaneously. Its built-in variometer allows it to use any conductive material as an antenna, from full-length steel towers to wet, salty egg noodles. A Mallory Inductuner is used to electronically adjust the apple iPi network used in the transponder assembly. The radio also includes highly accurate wattmeter that can measure forward, reflected, inner-conductor, outer-conductor, incidental, and re-radiated power. It will even measure power of other transmitters up to 30 feet away. The TBQ antenna connector will readily accept any size coax from RG174 to 6 inch hard-line. The radio's cover is held in place by several triple-bitted, five-sided

locks, each keyed differently, one on each corner, assuring the ultimate in security. The radio can be trunk, dash, or console mounted, duct-taped under an airplane, or easily held in two hands.
> But wait, there's more! If you read this within the next 10 minutes, we'll double your fun! The Gontor can even be used as a stand-alone repeater. It has a built-in Vari-gain, hybrid ring-tone, auto-tuning duplexer, based on the international Gld / Slvr / Brnz medallion technology. This allows it to handle any split or offset and still provide over 200dB isolation, making it ideal for law enforcement and public safety triplex operation. All voice transmissions made by users will be heard by anyone within earshot.
> Transmitter and Receiver Capabilities:
> It has the ability to simultaneously do Amplitude Modulation (AM) up to +/- 150% symmetrical or asymmetrical depth, single, double, and triple sideband with suppressed or reduced carrier, Frequency Modulation (FM) up to +/- 200 kHz deviation, and even Phase Modulation (PM) so it's compatible with all existing one-way, two-way, and three-way radio equipment made by GE, Motorola, Yaesu, Kenwood, Johnson, Icon, Alinco, etc. Privacy-Plus, SecureNet, Trunking, LTR, ZOWIE, TRBO, GRBL, APCO, P25, SPECTRE, and secure 512-bit encryption protocols are fully supported, however the radio is not certified for use outside this country, due to the Remulak zurls and other software patents. Subject: [HoustonScan] HPD new radio system

Sorry this took so long Wanted to make sure everything that we talked about worked out ok

First I want to thank everyone from the City of Houston and HPD for taking time to meet with us.

The City wants to work with the community to make sure that tow trucks, scanner users, media, and other smaller agencies will be able to continue to monitor all HPD dispatch channels and HFD A-1.

Without getting too technical ....

All of these channels will be retransmitted real time on channels that can be monitored with a P-25 700 - 800 MHz trunking scanner such as the Uniden HP-1, GRE PSR-600/PSR-500, or PSR 800 and I'm sure there are others as well

We got back together to test the proposed solution Friday afternoon using a PSR-500 scanner. All went very well. Some of you may have heard the testing

The city will release a list of TGs shortly after the complete system test is completed. Most likely first part of November so that everyone can be ready before the Dec. 31 deadline.

If anyone has any questions you can email me at radiobill66@... .

Also you can look for an artical in the Houston Chronicle Monday about system testing.

26793. Endeavour visit

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-09-16 19:40:57 UTC
From: Eric C. Carlson
Topic: 26793 Message: 26793

The Endeavour shuttle visit is delayed 1 day due to weather. It now possibly will arrive on Tuesday.
http://blog.chron.com/sciguy/2012/09/shuttle-ferry-flight-delayed-due-to-weather/
It will be doing fly-bys at 1500 feet of IAH, HOU, EFD, downtown, JSC, Ship Channel, San Jacinto monument and Galveston on the morning it arrives before landing at EFD. Let's compile some frequencies to monitor...

230.5 NASA research aircraft
235.4 NASA Maintenance Control EFD
Houston TRACON http://www.radioreference.com/apps/db/?aid=1129
IAH http://www.radioreference.com/apps/db/?aid=1114
HOU http://www.radioreference.com/apps/db/?aid=1104
EFD http://www.radioreference.com/apps/db/?aid=1106
Others?

-Eric

Subject: [HoustonScan] HPD new radio system

Sorry this took so long Wanted to make sure everything that we talked about worked out ok

First I want to thank everyone from the City of Houston and HPD for taking time to meet with us.

The City wants to work with the community to make sure that tow trucks, scanner users, media, and other smaller agencies will be able to continue to monitor all HPD dispatch channels and HFD A-1.

Without getting too technical ....

All of these channels will be retransmitted real time on channels that can be monitored with a P-25 700 - 800 MHz trunking scanner such as the Uniden HP-1, GRE PSR-600/PSR-500, or PSR 800 and I'm sure there are others as well

We got back together to test the proposed solution Friday afternoon using a PSR-500 scanner. All went very well. Some of you may have heard the testing

The city will release a list of TGs shortly after the complete system test is completed. Most likely first part of November so that everyone can be ready before the Dec. 31 deadline.

If anyone has any questions you can email me at radiobill66@... .

Also you can look for an artical in the Houston Chronicle Monday about system testing.

26820. Re: Endeavour visit

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-09-19 15:43:56 UTC
From: MylesB
Topic: 26793 Message: 26820

Got a few good shots. Could barely see the tail sections when it landed and is turning around to the taxiway. Lighting was not ideal as it was to the east and very hazy. I'll post when I get home.

26821. Re: [HoustonScan] Re: Endeavour visit

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-09-19 15:49:42 UTC
From: Kevin Chessher
Topic: 26793 Message: 26821

X2 on the haze (no, not TDMA)...well, back to troubleshooting.

Subject: [HoustonScan] Re: Endeavour visit

Got a few good shots. Could barely see the tail sections when it landed and is turning around to the taxiway. Lighting was not ideal as it was to the east and very hazy. I'll post when I get home.

Gre-psr 500 should do the trick. You can call Advanced communications. They will.also program it for you too. Or if you are going to listen to Houston in the near future you will.need a 600.

Connected by DROID on Verizon Wireless

You'll need something that supports rebanding:
http://wiki.radioreference.com/index.php/Category:Rebanding_Supported_Scanners

Fort Bend does have a simulcast site on the 1A7 TxWARN P25 system that
the entire county will eventually migrate over to.

DPS to Showcase Past and Present Resources at Austin Museum Day

Exhibits to include patrol boat and cars, helicopter, motorcycles, SWAT and crime lab vehicles
AUSTIN - The Texas Department of Public Safety (DPS) will showcase its history as well as its current law enforcement capabilities on Sunday, Sept. 23, as part of Austin Museum Day, which features free exhibitions and activities at participating Austin-area museums and cultural sites. The DPS Historical Museum and Research Center is sponsoring the event at DPS Headquarters (5805 N. Lamar Blvd., Building A, Austin, TX 78752) from 12 p.m. - 5 p.m. on Sunday, which will be free and open to the public.

The DPS Historical Museum and Research Center event will highlight the department's rich history, displaying a vintage patrol car and motorcycle, along with vintage uniforms. Additionally, equipment currently being used by the department will be showcased, including a 34-foot shallow water interceptor. These new patrol vessels, equipped with multiple .30 caliber machine guns and three 300 horsepower engines, are assigned to patrol the Texas Coast and Rio Grande River.

Other DPS displays will include the:

<http://www.txdps.state.tx.us/director_staff/public_information/images/boatLg.jpg> Description: boat

<http://www.txdps.state.tx.us/director_staff/public_information/images/planeLg.jpg> Description: helicopter

* EC-145 helicopter, DPS' largest and most versatile helicopter, which has flown missions all over the state and the Texas-Mexico border;
* Crime Lab Crime Scene Vehicle, which is regularly deployed to crime scenes to assist in the investigation of crimes in Texas;

<http://www.txdps.state.tx.us/director_staff/public_information/images/DPSCaninelg.jpg> Description: DPS Canine

<http://www.txdps.state.tx.us/director_staff/public_information/images/DavidsonRoadKingLg.jpg> Description: Harley Davidson Road King

* Harley Davidson Road King Police Motorcycle and the Bike Patrol, assigned to patrol the Capitol Complex in Austin;
* Texas Ranger SWAT Team V-150 armored personnel carrier, which is deployed when responding to statewide critical incidents of a high risk nature, such as hostage situations, barricaded subjects, and active shooter incidents;

<http://www.txdps.state.tx.us/director_staff/public_information/images/crimelabvehiclelg.jpg> Description: Crime Lab Crime Scene Vehicle

<http://www.txdps.state.tx.us/director_staff/public_information/images/V-150Lg.jpg> Description: V-150 armored personnel carrier

* Tejas Mobile Command Center, a self-contained mobile communications command center that deploys across Texas in response to natural disasters, law enforcement events and other emergency situations; and
* Canine Unit, which uses specially-trained dogs to search for narcotics and explosives.

DPS is one of many museum venues around Austin that will open their doors free of charge for Austin Museum Day on Sunday. For a complete list of activities, please visit: http://www.austinmuseums.org/wp-content/uploads/2012/09/AMD2012PressRelease_Sept13.pdf.

26840. Harris County-Houston combined radio shop

Not sure if this was a drill, related to the Endeavour leaving or what but I caught some unusual traffic on 123.1 on 9/20 around 9:45 AM:

"do you require assistance, ...ignored all hand signals if you copy me and copy this transmission rock your wings, 032 go you're loud and clear, 032 ... violation going to be 1216 radios are back working we were ignored though we're talking to ATC requesting landing instructions for the violation, evaluation of instructions 031 on your left wing has been instructed to guide you to land at Ellington Field EFD how copy, ...drone 3 copies thanks, frequency for Houston Center is 134.8 how copy, drone 3 copies thanks"

-Eric

I did it manually on Uniden and GRE radios (but I don't have a PSR-410) by following Kevin's instructions posted pre-rebanding. Since we are now post-rebanded, please follow instructions for that.

You'll have to consult your owner's manual to find out how to get to the tables. Then you select your entries from the first two lines provided by Kevin's GRE instructions. That's all I know. My advice is to give it a try. As I recall, it took me a time or two to figure it out, but it was "figure-outable"! Hope this helps.

It is 5 States Helicopters N5XY. They are lifting numerous metal trusses
to the roof of America Tower on Allen Parkway.

Let's try that again; it's N4XY from 5 State Helicopters.

From: speedrcr78
Topic: 26880 Message: 26880

I have been playing around with a psr-600 and I am trying to use the southwest site. I am getting great signal strength and I am receiving the trunking data but I am not hearing any traffic. Is this site not operational yet? Thanks for everyone's replies in advance.

26881. Re: Southwest Simulcast site on 1A7

I noticed the same thing last week on the Northwest site, since those 4 simulcast sites are the ones that came from the now inactive Houston Public Safety TRS, I figured they may be restricting the use until HFD and HPD move to it. But that is just a guess.

If you look at it on Pro96Com or Unitrunker you'll see quite a bit of activity during the day, but it's all Phase 2 TDMA which the GRE"s can't decode.

From: Kevin Chessher
Topic: 26891 Message: 26892

If you put them in a separate TSYS that defeats the purpose of Multi-Site. Put them all in the same TSYS and choose Stat and Check All CC. If you choose Roam it will pick what it thinks is the best CC, which doesn't always work well. With Stat and Check All CC it will check each CC on every pass.

BUT if you want to emulate a SmartZone radio you must choose Roam. You may need to adjust the settings to get it to properly choose and stay on the best site.

Roam picks the best (or what it thinks is the best). Stat will pick the first one it can decode, unless you have "check all cc" enabled, then it will check every cc on every pass through.

From the Harris County Commissioners Court agenda for October 9:

Request for approval of an interlocal agreement with the City of Houston for the purchase of land and construction of a joint radio service facility.

Request for approval of an agreement with the City of Houston for
lease of space at
4719 North Shepherd Drive for temporary housing of the Information Technology Center’s radio shop, and for authorization for the County Auditor to
reimburse the city
for utility expenses.

Phonoscope, Inc., in the amount of $6,625 sole source for relocation of an ethernet circuit from the Information Technology's radio shop at 2500 Texas Avenue to 4719 North Shepherd, and for the County Judge to execute the amendment to the agreement.

Speaking of that facility, I had an aunt and uncle whose farm backed up to it. It was at the far end of their property, when we visited them in the late 60's-early 70's I would walk back there and watch them do touch and goes. Their fence was about 50 feet from the runway. Fun times!

Sorry, I forgot to add this link as well. Evidently NASA's WB-57's have been busy acting as BACN - Battlefield Airborne Communication Node test beds.

26909. scanners that get the job done

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-10-10 13:59:51 UTC
From: Sandyj
Topic: 26909 Message: 26909

I just recieved a new PSR 600 scanner from Advanced communications they upgraded it to the latest setting as well as programmed it for me
at no cost to do so . it works great and handles the DPS set beautifully if you extend the anntena to its full length as it transmit in the 157.000 feq . range. if any one is interested in this you can contact the person below and let him know that i recomened them. i have no financal or any other connections with them other then being a client. and they do carry the complete PSR systems from the 400 to the 800 scanners. depending on were you live most items are recieved with in one working day. two of the scanners the 500 andthe 800 are handhelds with the 800 being the top of the line. the 600 is the table top/mobile version of the 800 scanner.

M-F 8-5 @ 713-827-7971 ask for Pete Journey Advanced Communications

taint right - taint wrong - it jest is

26910. Ham radio science project

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-10-11 00:23:18 UTC
From: Brian Martin
Topic: 26899 Message: 26910

My 9 year old son, Kie, just passed his Technician. For his science project his question is "How does the height of an antenna affect the distance VHF radio waves will travel?" On Saturday the 13th we will be airborne in a helicopter trying to determine how height affects the distance. If anyone is monitoring on Saturday I would appreciate you checking in and giving a zip code.

I greatly appreciate your help and look forward to talking to you airborne.

i did this one already working for metro traffic in Boston. i had my ht with me.
at about 1,000 feet above the ground i was hitting repeaters in New Hampshire from Boston.
i also got a radio check from a repeater that was listed as 275 miles away at 1,200 feet.
mileage will vary...batteries not included...

26913. Reception on 1A7

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-10-11 02:57:18 UTC
From: speedrcr78
Topic: 26913 Message: 26913

I have been monitoring 1a7 a lot lately and it seems that the reception is really bad particularly in the southwest part of Houston. I am using a GRE PSR-600. I have absolutely no issues listening in Katy on the Fort Bend simulcast site. And even today I was on the east side of town and I got great reception all the way east on I-10 past the beltway. I was just wondering if anyone else noticed this.

26915. HPD Unit IDs

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-10-11 02:59:42 UTC
From: Eric C. Carlson
Topic: 26915 Message: 26915

It appears that HPD shuffled up their assignments for the numeric-only unit IDs. SWAT is using 16xx (vs. 9xx) from at least 8/28. The mayor's detail appears to be 5xx now. I'm told the Crime Reduction Unit is no longer on 55xx.

This is to officially inform you that it has come to our notice and we have thoroughly completed an investigation with the help of our Intelligence Monitoring Network System that you legally won the sum of $800,000.00 USD. from a Lottery Company in the United States of America. During our investigation we discovered that your e-mail won the money from an Online Balloting System and we have authorized this winning to be paid to you via a Certified Cashier's Check.

Normally, it will take up to 10 business days for an International Check to be cashed by your local banks. We have successfully notified this company on your behalf that funds are to be drawn from a registered bank within the United States of America so as to enable you cash the check instantly without any delay, henceforth the stated amount of $800,000.00 USD. has been deposited with Bank Of America.

We have completed this investigation and you are hereby approved to receive the winning prize as we have verified the entire transaction to be Safe and 100% risk free, due to the fact that the funds have been deposited at Bank

Of America you will be required to settle the following bills directly to the Lottery Agent in-charge of this transaction whom is located in Oregon, United State of America. According to our discoveries, you were required to pay for the following -

* Deposit Fee's (Fee's paid by the company for the deposit into an American Bank which is - Bank of America)
* Cashier's Check Conversion Fee (Fee for converting the Wire Transfer payment into a Certified Cashier's Check)

The total amount for everything is $550.00 (Five Hundred and Fifty USD.) We have tried our possible best to indicate that this $550.00 should be deducted from your winning prize but we found out that the funds have already been deposited at Bank Of America and cannot be accessed by anyone except the legal owner (you), the winner; therefore you will be required to pay the required fee's to the Agent in-charge of this transaction via Western Union Money Transfer Or Money Gram.

In order to proceed with this transaction, you will be required to contact the agent in-charge (MICHEAL PATEL) via e-mail. Kindly look below to find appropriate contact information:

CONTACT AGENT NAME: MICHEAL PATEL

E-MAIL ADDRESS: michealpatel6@...

You will be required to e-mail him with the following information:

FULL NAME:
ADDRESS:
CITY:
STATE:
ZIP CODE:
DIRECT CONTACT NUMBER:

You will also be required to request Western Union details on how to send the required $550.00 in order to immediately ship your prize of $800,000.00 USD via Certified Cashier's Check drawn from Bank of America, and also include the following Fund Reference Identification : EA2948-910.

This letter will serve as proof that the Federal Bureau Of Investigation is authorizing you to pay the required $550.00 ONLY to Mr. MICHEAL PATEL via information in which he shall send to you, if you do not receive your winning prize of $800,000.00 we shall be held responsible for the loss and this shall invite a penalty of $3,000 which will be made PAYABLE ONLY to you (The Winner).

Please find below an authorized signature which has been signed by the FBI Public Affairs Director - Robert Mueller

I have some things to do right now, but I did download the update. The only problem is, I am not sure how you would apply a firmware update with going through EZScan. How does one do it with out using the software?

You don't apply them through EZScan, there are standalone applications for both the CPU and the DSP.

I had to edit the trunking tables to get it to decode properly, but it does work.

Subject: [HoustonScan] FW: F.B.I Private Message(Treat Confidential)

Normally, I just delete these obvious email scams from my junk folders without looking at them but when I received an email from the FBI (with a Taiwan email address), I just had to dig deeper.

I say that the folks that are suckered into these things deserve what they get. Stupid is as stupid does.

I’m obviously in breach of the confidentiality clause and I’m sure that agents will be arriving to pick me up shortly.

935 Pennsylvania Avenue,
NW Washington, D.C. 20535-0001

REF: US/28028/8A28/11

ATTN: RECIPIENT

This is to officially inform you that it has come to our notice and we have thoroughly completed an investigation with the help of our Intelligence Monitoring Network System that you legally won the sum of $800,000.00 USD. from a Lottery Company in the United States of America. During our investigation we discovered that your e-mail won the money from an Online Balloting System and we have authorized this winning to be paid to you via a Certified Cashier's Check.

Normally, it will take up to 10 business days for an International Check to be cashed by your local banks. We have successfully notified this company on your behalf that funds are to be drawn from a registered bank within the United States of America so as to enable you cash the check instantly without any delay, henceforth the stated amount of $800,000.00 USD. has been deposited with Bank Of America.

We have completed this investigation and you are hereby approved to receive the winning prize as we have verified the entire transaction to be Safe and 100% risk free, due to the fact that the funds have been deposited at Bank Of America you will be required to settle the following bills directly to the Lottery Agent in-charge of this transaction whom is located in Oregon, United State of America. According to our discoveries, you were required to pay for the following -

* Deposit Fee's (Fee's paid by the company for the deposit into an American Bank which is - Bank of America)
* Cashier's Check Conversion Fee (Fee for converting the Wire Transfer payment into a Certified Cashier's Check)

The total amount for everything is $550.00 (Five Hundred and Fifty USD.) We have tried our possible best to indicate that this $550.00 should be deducted from your winning prize but we found out that the funds have already been deposited at Bank Of America and cannot be accessed by anyone except the legal owner (you), the winner; therefore you will be required to pay the required fee's to the Agent in-charge of this transaction via Western Union Money Transfer Or Money Gram.

In order to proceed with this transaction, you will be required to contact the agent in-charge (MICHEAL PATEL) via e-mail. Kindly look below to find appropriate contact information:

CONTACT AGENT NAME: MICHEAL PATEL

E-MAIL ADDRESS: michealpatel6@...

You will be required to e-mail him with the following information:

FULL NAME:

How did it go? ----- Original Message ----- From: "Brian Martin" To: HoustonScan@yahoogroups.com Sent: Thursday, October 11, 2012 2:27:32 PM Subject: [HoustonScan] Science fair project

My 9 year old son, Kie, just passed his Technician. For his science project his question is "How does the height of an antenna affect the distance VHF radio waves will travel?" On Saturday the 13th we will be airborne in a helicopter trying to determine how height affects the distance. If anyone is monitoring on Saturday I would appreciate you checking in and giving a zip code. We should be wheels up at 11:00 and operating on 146.52 and the outputs of the 146.94 machine, and 145.11 machine.

I greatly appreciate your help and look forward to talking to you airborne. Brian N5KIE

26938. Amateur Radio Gets Secondary MF Allocation at WRC-12

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-10-14 00:56:44 UTC
From: Sandyj
Topic: 26938 Message: 26938

Amateur Radio Gets Secondary MF Allocation at WRC-12
02/14/2012

It’s official -- delegates attending the 2012 World Radiocommunication Conference (WRC-12) have approved a new 7-kilohertz-wide secondary allocation between 472-479 kHz for the Amateur Radio Service. Agenda Item 1.23 had both its first and second readings in Plenary Session on Tuesday, February 14; to become part of the ITU’s Radio Regulations, each Agenda Item must be read twice in Plenary Session. While the Final Acts will be signed on Friday, February 17 at the close of the Conference, the new allocation will not take effect until it is entered into the Radio Regulations. No date has been set for this, but it is unlikely to be earlier than January 1, 2013. In any case, no amateur can use the band until his or her national regulations are revised to implement the allocation.

This is a fantastic achievement for the Amateur Radio Service,€☐ IARU President Tim Ellam. VE6SH, told the ARRL. A new allocation for spectrum is always something that should be celebrated. The success on this issue is due to the hard work over the last four years from our IARU representatives, as well as the volunteers from the numerous IARU Member-Societies who have worked within the ITU process on behalf of their national administrations. This is excellent work from our team in Geneva, and from those who have assisted from their home countries.€☐

Agenda Item 1.23 originally called for a 15-kilohertz-wide spectrum in parts of the band 415-526.5 kHz, taking into account the need to protect existing services. But according to ARRL Chief Executive Officer David Sumner, K1ZZ, this was in conflict with the Maritime Mobile Service. WRC-12 delegates approved Agenda Item 1.10, which called for a worldwide exclusive allocation to the Maritime Mobile Service of 495-505 kHz. Discussion of this allocation to Maritime Mobile has been in the works throughout the conference preparation (i.e. since 2008),â€ Sumner explained, and was the reason why the MF amateur allocation could not be made in this band as some amateurs had hoped. That’s why we had to look elsewhere and is what put us in conflict with aeronautical radionavigation.

According to Colin Thomas, G3PSM, CEPT Coordinator for Agenda Item 1.23, WRC-12 delegates moved forward early in the Conference with what he called a compromise proposalâ€☐ for the new allocation. Progress was made with a compromise proposal on Agenda Item 1.23, drafted to take into consideration the views of those for and those against an Amateur Service allocation around 500 kHz. This proposal suggests a 7-kilohertz segment between 472-479 kHz, very close to the CEPT position of 472-480 kHz.

The new allocation calls for a worldwide secondary allocation to the Amateur Service at 472-479 kHz, with a power limit of 1 W EIRP. A provision has been made, however, for administrations to permit up to 5 W EIRP for stations located more than 800 km from certain countries that wish to protect their aeronautical radionavigation service (non-directional beacons) from any possible interference. Footnotes (see below) provide administrations with opportunities to opt out of the amateur allocation and/or to upgrade their aeronautical radionavigation service to primary, if they wish to do so. In addition to these protections for aeronautical radionavigation, the Amateur Service must avoid harmful interference to the primary maritime mobile service. Quite a few additional administrations -- mainly in the former Soviet Union and the Arab states -- added their country’s names to the Footnotes prior to the Agenda Item’s consideration in Plenary.

More than 3000 participants -- representing more than 150 out of the International Telecommunication Union’s 193 Member States -- are attending the four-week conference. About 100 Observers from among the ITU’s 700 private sector members -- along with international organizations, including the International Amateur Radio Union -- are also in attendance. A number of WRC-12 delegates are radio amateurs, with many of them operating at 4U1ITU, the Amateur Radio station at ITU Headquarters. The station has been using the call sign 4U1WRC throughout the duration of the Conference.

Footnotes to Agenda Item 1.23

5.77 Different category of service: In Australia, China, the French overseas communities of Region 3, the Republic of Korea, India, Iran, Japan, Pakistan, Papua New Guinea and Sri Lanka, the allocation of the frequency band 415-495 kHz to the aeronautical radionavigation service is on a primary basis. In Armenia, Azerbaijan, Belarus, the Russian Federation, Kazakhstan, Latvia, Uzbekistan and Kyrgyzstan, the allocation of the frequency band 435-495 kHz to the aeronautical radionavigation service is on a primary basis. Administrations in all the aforementioned countries shall take all practical steps necessary to ensure that aeronautical radionavigation stations in the frequency band 435-495 kHz do not cause interference to reception by coast stations of transmissions from ship stations on frequencies designated for ship stations on a worldwide basis.

5.82 In the maritime mobile service, the frequency 490 kHz is to be used exclusively for the transmission by coast stations of navigational and meteorological warnings and urgent information to ships, by means of narrow-band direct-printing telegraphy. The conditions for use of the frequency 490 kHz are prescribed in Articles 31 and 52. In using the frequency band 415-495 kHz for the aeronautical radionavigation service, administrations are requested to ensure that no harmful interference is caused to the frequency 490 kHz. In using the frequency band 472-479 kHz for the Amateur Service, administrations shall ensure that no harmful interference is caused to the frequency 490 kHz. (Emphasis added)

5.A123 The maximum equivalent isotropically radiated power (EIRP) of stations in the Amateur Service using frequencies in the band 472-479 kHz shall not exceed 1 W. Administrations may increase this limit of EIRP to 5 W in portions of their territory which are at a distance of more than 800 km from the borders of Algeria, Saudi Arabia, Azerbaijan, Bahrain, Belarus, China, Comoros, Djibouti, Egypt, United Arab Emirates, the Russian Federation, Iran, Iraq, Jordan, Kazakhstan, Kuwait, Lebanon, Libya, Morocco, Mauritania, Oman, Uzbekistan, Qatar, Syrian Arab Republic, Kyrgyzstan, Somalia, Sudan, Tunisia, Ukraine and Yemen. In this frequency band, stations in the Amateur Service shall not cause harmful interference to, or claim protection from, stations of the aeronautical radionavigation service.

5.B123 The use of the frequency band 472-479 kHz in Algeria, Saudi Arabia, Azerbaijan, Bahrain, Belarus, China, Comoros, Djibouti, Egypt, United Arab Emirates, the Russian Federation, Iraq, Jordan, Kazakhstan, Kuwait, Lebanon, Libya, Mauritania, Oman, Uzbekistan, Qatar, Syrian Arab Republic, Kyrgyzstan, Somalia, Sudan, Tunisia and Yemen is limited to the maritime mobile and aeronautical radionavigation services. The Amateur Service shall not be used in the above-mentioned countries in this frequency band, and this should be taken into account by the countries authorizing such use.

That may go back to the existing bug with X2-TDMA and encryption; it ignores how you have it set (tone, silence, or garbled audio) and just spits garbled audio at you. Another annoying bug I noticed is that after it detects a talkgroup patch while parked on a talkgroup it drops into open talkgroup search after the initial radio dekeys. On 10/13/2012 9:15 PM, kayi4cle wrote: > > Have you had a chance to evaluate how it handles ENC? Someone on RR > said it wasn't handled "gracefully." Is the GRE 600 the only scanner on the market currently that will be able to listen to system 1A7?
Like lots of folks on in the Houston Area looking at what is is going to take to continue to listen to HPD and HFD after the first of the year if not sooner,
will the 996XLT listen to 1A7 as long as it is in the clear? is is a waste of time to program 1A7 into the 996XLT?

Date: 2012-10-14 23:06:38 UTC
From: Eric C. Carlson
Topic: 26962 Message: 26962

Around 3:00-3:30 PM today there was a helicopter up on 151.625 [210.7] apparently coordinating some sort of equipment lift operations in the downtown area. I saw a large orange helicopter headed westbound along West Gray out of downtown shortly after and then heard nothing further. Last two on the N number appeared to be "NV." He also stated "when you talk to the cops let them know we don't need them tomorrow."

Not exactly.... they are going to simulcast the main hpd dispatch channels in a format which will work for that scanner. However eventually they will go to all phase 2 so if you are in the market I would just spend the extra money.

Speaking just as a programmer, it's all a question of how you parse the data stream. Of course, the issue with the XT might be the classic, "is it fast enough to keep up?"

26973. uniden HP1 question

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-10-16 12:18:17 UTC
From: Marvin Suggs
Topic: 26851 Message: 26973

How does the HP1 know what tower to associate with? for example HCSO (2318). and what about the 1A7 sites? how does it chose what tower to lock into?

Thanks Marvin

That depends. Are you using "Location" scanning or not? Are you using a GPS unit or you just telling it where your with Location scanning on. It also depends on if you are using a Favorites list that you customized or if you are using the Database directly.

It is a little hard to tell you in a short message but what I am thinking you are after, is directing it to use certain towers only. To do that you are going to have to set up Favorite lists, and then on those lists remove the unwanted towers (or just mark them as Avoid). Then use the Favorite Lists without location scanning on to do the scanning. This is assuming you are stationary, like at home or the office. If mobile it gets a bit more complicated (or easier) depending on the approach.

The one thing I can tell you is that if you are locking on to any of the Layer 3 sites (NE, SE, SW, NW simulcast or the single sites) you need to set up a favorites list without those sites in them, at least right now. Other than the CWID and two transmissions (which I am sure were mistakes) all the traffic coming from those sites is Phase 2 (mostly encrypted), which of course the HP1 doesn't handle.

I don't know where you are located but the fort bend simulcast site works very well for west houston. I don't know how the hp1 is but I had better luck with telling the scanner which tower to use. I have the psr-600 and the multi-site roam doesn't work so good

Never used it personally, but I suspect the problem is that the receiver can't distinguish between actual control channel RF and noise/overload from cellular. A good way to tell is to park on the control channel, and if you're only hearing unsquelched noise or weak reception of the control channel but the S-meter is showing full strength it's being overloaded.

On real radios it works quite well once the RSSI (relative signal strength indicator, expressed as a numerical value from ~30 to ~128) settings are optimized.

Cell-phone jammers should be MANDATORY on all moving vehicles. In fact, the jammers should be buried in the ECU so they cannot be disabled without disabling the vehicle.

The cellular lobby will never let any kind of public jamming device become legal. Why do you think the FCC is so serious abut it? ($$$)

Two other factors to consider: inadvertent jamming of public safety, and civil liability on the part of the jammer (person has an emergency, tries to call 911, can't because there's a jammer in the vicinity, dies or is seriously injured as a result.)

You're talking about a big brother mandate. If forced, that's how I'd do it. No, I wouldn't want one either.

I will, however, chuckle at the next person with a wave bubble that gets a $100k NAL letter from the FCC.

http://www.ladyada.net/make/wavebubble/

I'm still waiting for the FCC to issue an NAL to the city of San Francisco for using a jammer as part of crowd control.

Apparently, a 2005 law makes this legal.

Interesting, Eric.

I wonder if this is a case of hiding in plain sight, or just twisting the channel selector until you find a channel to use?

Certain comparable agencies are notorious in my area for doing that kind of stuff on the statewide system. A couple times a year they'll pick a mutual aid talkgroup (clear) and do a big sweep over a few days. Guys get together and just dial around the radio and find a channel that everyone has, and away they go. It's often even the wrong talkgroup for the region they are in. Get 'er dun' I guess.

That's how they did it in Japan back in 2000. The only thing you could do is receive calls and dial emergency services.

Never used it personally, but I suspect the problem is that the receiver can't distinguish between actual control channel RF and noise/overload from cellular. A good way to tell is to park on the control channel, and if you're only hearing unsquelched noise or weak reception of the control channel but the S-meter is showing full strength it's being overloaded.

On real radios it works quite well once the RSSI (relative signal strength indicator, expressed as a numerical value from ~30 to ~128) settings are optimized.

GRE US Personnel Attempt Restart of GRE Business. Same Customer Service, Warranty and Repair Remains

By Wayne Wilson, former Executive VP GRE

Tuesday, Oct. 16, 2012

FORT WORTH, Texas, Oct. 16, 2012 - In early October, all US GRE Sales and Development team were
advised by GRE-Japan that scanner manufacturing was shut down; nearly all GRE personnel in Asia and
USA were dismissed. Since that time, the US Team has been working to rebuild the company and get
back into production.

Personnel remain at the US office in Belmont, CA, 650-591-1400, charged with the responsibility to
sell off all remaining scanner inventory and continue scanner customer service and repair, including
warranty repair. It is intended that this office will remain open even once scanner inventory is
depleted; this office also distributes the Alinco Amateur Radio product line.

Wayne Wilson, former VP, said, "We know the rumors are out there about GRE and the recent release of
a free P25-Phase II (TDMA) firmware update for our PSR-800 last Friday, Oct 12th caused more
confusion as scanner advocates asked themselves if GRE was still here or really gone? We were told
gone, but we have launched a heroic effort to obtain rights to continue the same products as well as

develop new scanners - essentially pick up where it was dropped."

GRE thanks our loyal customers and dealers for past business, and probably under a new brand name,
the US team will re-introduce this fine line of scanners sometime soon.

I'm okay with this. GRE Japan released information under strict NDA for you to write software for their scanners. I'm hoping the new GRE will survive and adopt an open policy - like programming information as a public PDF download.

Uniden has done well for the scanning community but they need competition to keep them busy innovating.

It would be really cool if GRE could start manufacturing stateside.

Well, I finally started trying to update my Pro 197 with WIN 500 and ran into a problem.

I can't upload to the scanner because the program is using COM 9 instead of COM 6 where the USB cable is connected.

I can't find an answer in the software so any help on how to solve this would be greatly appreciated.

GRE US Personnel Attempt Restart of GRE Business. Same Customer Service, Warranty and Repair Remains

By Wayne Wilson, former Executive VP GRE

Tuesday, Oct. 16, 2012

FORT WORTH, Texas, Oct. 16, 2012 - In early October, all US GRE Sales and Development team were advised by GRE-Japan that scanner manufacturing was shut down; nearly all GRE personnel in Asia and USA were dismissed. Since that time, the US Team has been working to rebuild the company and get back into production.

Personnel remain at the US office in Belmont, CA, 650-591-1400, charged with the responsibility to sell off all remaining scanner inventory and continue scanner customer service and repair, including warranty repair. It is intended that this office will remain open even once scanner inventory is depleted; this office also distributes the Alinco Amateur Radio product line.

Wayne Wilson, former VP, said, "We know the rumors are out there about GRE and the recent release of a free P25-Phase II (TDMA) firmware update for our PSR-800 last Friday, Oct 12th caused more confusion as scanner advocates asked themselves if GRE was still here or really gone? We were told gone, but we have launched a heroic effort to obtain rights to continue the same products as well as develop new scanners - essentially pick up where it was dropped."

GRE thanks our loyal customers and dealers for past business, and probably under a new brand name, the US team will re-introduce this fine line of scanners sometime soon.

La Marque is testing a robot dispatcher on 53904 (Ch. 1) that sounds a bit like Perfect Paul from NOAA.

Also heard Waller County tone all departments earlier this morning on 155.76 and advise "we are now narrowbanded."

That is his reward for passing his ham test. The kid programs radios, RSS, CPS, etc. He deserves one.

His is a VHF/UHF split though. I ain't paying for anything that can be bricked remotely to be on a trunk system.
It's scanner time when they switch over.

GRE US Personnel Attempt Restart of GRE Business. Same Customer Service, Warranty and Repair Remains

By Wayne Wilson, former Executive VP GRE

Tuesday, Oct. 16, 2012

FORT WORTH, Texas, Oct. 16, 2012 - In early October, all US GRE Sales and Development team were
advised by GRE-Japan that scanner manufacturing was shut down; nearly all GRE personnel in Asia and
USA were dismissed. Since that time, the US Team has been working to rebuild the company and get
back into production.

Personnel remain at the US office in Belmont, CA, 650-591-1400, charged with the responsibility to

sell off all remaining scanner inventory and continue scanner customer service and repair, including
warranty repair. It is intended that this office will remain open even once scanner inventory is
depleted; this office also distributes the Alinco Amateur Radio product line.

Wayne Wilson, former VP, said, "We know the rumors are out there about GRE and the recent release of
a free P25-Phase II (TDMA) firmware update for our PSR-800 last Friday, Oct 12th caused more
confusion as scanner advocates asked themselves if GRE was still here or really gone? We were told
gone, but we have launched a heroic effort to obtain rights to continue the same products as well as
develop new scanners - essentially pick up where it was dropped."

GRE thanks our loyal customers and dealers for past business, and probably under a new brand name,
the US team will re-introduce this fine line of scanners sometime soon.

Topic: 26999 Message: 27024

To be accurate, the PSR800 has supported TDMA since it was introduced.
It came out of the box doing X2-TDMA.

The beta firmware released last week did allow it to follow Phase 2 TDMA TGs at the expense of fouling up the second slot of X2 TDMA traffic.

It is reliably reported that the problem is fixed and an update will be released soon.

Lou

Allowed? Don't ask such questions, the confused mind always says "no".
Assume you have the right to monitor public airwaves and leave it at that.

Thanks for the response. I've "snuck" my scanner in several times in years past out of concern that it would be taken at the security inspection. I believe as you that we are free to monitor whatever we desire and don't want to have to go through the cloak and dagger routine to enjoy my radio at a public event. I was reading in the Monitoring Times Aishow Special about what to bring, and what not to bring where is says to make sure scanners are allowed so I thought I'd ask the question...

27039. Programing P-25 on 700 and 800?

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-10-22 19:15:04 UTC
From: daysand16
Topic: 27039 Message: 27039

I have a Pro-106
I assigned Metro,Motorola Re band 800 on Scan list 1.
I assigned Metro P-25, 700 on Scan list 2.
I assigned Metro P-25, 800 on Scan list 3.

I hear the same transmissions of Metro using P-25 On Both 700 and 800.

My question is about the Separation between P-25,on the 700 and 800.

Would Harris County or other Public Safety agencies using P-25 on both 700 and 800, be the same way as Metro?
(by using P-25,and making the Same transmissions on Both700 and 800)?

If this is so.

Then it looks like I would only need to assign Harris County using Motorola 800 Re band on one Scan list.
Then only have to assign Harris County P-25,700 on another Scan list.

I sure would appreciate some information on the P-25,700 and 800 when I program my Pro-106.
Thank you
Daysand16

27042. Confused in Spring

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-10-24 17:00:18 UTC
From: Andrew
Topic: 27042 Message: 27042

First off, I'm a licensed ham and have been since 1998. I got into scanning a few years before that using my grandfather's old Bearcat programmable scanner from the '80s. Back then scanning was simple and fun. I then bought my own scanner, the then-expensive RadioShack PRO-90 TrunkTracker and after some confusion and self-education concerning trunking I was able to have fun listening to it to hear what was going on locally or if I desired, farther away. I kind of grew out of the hobby after a few years and sold the scanner a few years ago.

Fast forward to today and I'm sitting in front of a new GRE PSR-800 looking through the available systems, talk groups and sites to monitor and I feel like I'm in over my head. I know what I want to do, I want a local police bank (err, scanlist), a local fire/EMS bank, an HPD bank, an HFD bank, a Tomball bank, an Humble bank, etc. I'm just not sure what all systems, talk groups and sites I should include in each bank.

So far I've got scanlist 1 set up to receive only the local site, Spring (Tamina), scanning the HCCO Pct. 4 and HCSO North and East talk groups on the analog TxWARN system.

Does anyone in the same area have any recommendation on what I should include in my scanlists?

I’m getting word that the WOH staff radios are digital this year. Don’t know what kind of mode but being commercial, it may be something we can’t monitor with typical scanners.

I’ll try to get more info the next couple of days.

At least airboss will be AM!

The big radio rental providers (namely Bearcom) are really pushing TRBO for their rental fleets. Typically there's no extra charge versus an analog radio (usually HT750s and HT1250s, which have been discontinued by Big M) so they can push "digital range" and "digital clarity" as free bonuses. And yes, TRBO digital can be used in simplex.. Close Call won't even hit on it.

There is a hydrochloric acid leak at the Port of Texas City with the city under a shelter-in-place order.

Communications on TxWARN Analog:
55184 - Texas City Fire Dispatch
55216 - Texas City EMS
55280 - Texas City Fireground 1
55376 - IMAS Mutual Aid
55408 - Industrial Fireground 1

*55440 - Industrial Fireground 2 is being keyed up by some sort of patch off 55376 but can be ignored since it is the same traffic with a short delay.

Kingwood is covered by HFD (Tac 2 response) and HPD (A2 - Northeast.)
Porter VFD is dispatched by Montgomery County Firecom on the VHF system.
I wouldn't recommend plugging Firecom in unless you're actually in MoCo
as they are.. exceptionally active.

Topic: 27042 Message: 27052

Thanks for the replies.

I know which agencies I want to monitor and I plan to have a separate scanlist for each one, but what I'm confused on is which talkgroups to add as far as interop, tac, etc. Tomball and Humble are easy, just add them all, but Harris County is confusing.

Also, when it comes to sites, is it wise to only monitor one or is it OK to try and monitor as many as you can? I know it would be slower scanning to monitor more sites, but I'd like to be able to travel around the city and listen without switching scanlists.

Right now I'm having fun listening to a Federal operation.

27053. Re: [HoustonScan] Re: Confused in Spring

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-10-25 17:24:43 UTC
From: Josh W.
Topic: 27042 Message: 27053

Quick rundown:
Tac North-A: Used by HCSO District 1
Tac East-A: Used by HCSO District 2
Tac South-A: Used by HCSO District 3
Tac Southwest-A: Used by HCSO District 4
Tac West-A: Used by HCSO District 5

The "Harris County Tactical" channels are used for interop between HCSO and the constable precincts for pursuits and the like. SO District 1 uses Tac 1, District 2 uses Tac 2, and so on down the line.

Site-hopping isn't really necessary unless you're out driving around. At the house just program whichever site has the best reception.. but keep in mind that for the most part you'll only hear agencies in the area of that tower's coverage.

Also FYI: in your area only Tomball uses the digital system exclusively. HCSO operates on both systems, and everyone else is on the analog system.

We need to qualify what you mean by "800" and "700". Harris County currently has P25 trunking on both 700 and 800 frequencies.

My guess on what you mean by "800" is system 2318, which would be all analog.

Topic: 27042 Message: 27069

Thanks. I think I'm getting more familiar with everything thanks to y'all's help and by doing more research.

I'm going to program a "Local Police" scanlist with all the local police activity on a local site, a "Local Fire/EMS" with the appropriate stuff, "HCSO" and "HCCO" scanlists that have all the Houston area sites for when I'm driving around, "Humble" and "Tomball" on their respective sites, etc., etc.

Thanks again everyone!

I don't know about today, but Pct 4 was using both before I left town on Monday.
Not to mention the Toll Road constables.

Lou

While we're on that note, if auto works, as it seemed to for me today is there a benefit to using the actual setting? I have a radio shack pro-106 and use the GRE/RS Object Programmer software. Among the various options for programming objects are "SQ Mode" and "SQ Code". For the squelch mode I'm not sure what to use. That being the case, is it ok too just leave it in "search" which according to the manual will automatically detect the appropriate mode. What, if any, would be the benefit to knowing and using the actual mode..."none" "CTCSS" "DCS" or "P25"?

27102. Programing Pro-106, P-25-700 and P-25-800

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-10-26 23:53:33 UTC
From: daysand16
Topic: 27102 Message: 27102

I am programing my Pro-106 and each type of communication has to be programed on a separate Scan List.

The Motorola trunk-ed 800,and the P-25-700 and P-25-800 each type has to be programed on a separate Scan List

So for the Scan-list.1
I have programed the Harris County Sheriff Dept and Constables using
The Motorola trunk-ed 800.

For Scan-list 2.
I have programed the Harris County Sheriff Dept and Constables using the trunk-ed P-25,700.

Before I program Scan-List 3. with P-25-800,
I would like to know if
the Harris County Sheriff Dept and Constables use P-25-800?
Also If they do,Would there transmissions be simulcast on both P-25-700 and on P-25-800?

I think you just asked this question a couple of days ago. There are no digital transmissions the the 800 system (2318). It is all analog. The p25 system (1a7) which is 700/800 mhz has simulcast of HCSO and Precint 5.

Connected by DROID on Verizon Wireless

October 23, 2012

To our valued Dealers and Customers,

Due to circumstances beyond its control, General Research of Electronics of Japan (GRE) is temporarily not able to manufacture the GRECOM and Radio Shack branded radio scanners.

The Chinese Government’s plan to redevelop the area where the GRE factory had been in operation for over ten years finally forced its closure. Anticipating this eventuality, GRE was in the process of building a new factory but unfortunately the cost of raw materials, labor and increased taxes created a heavy financial investment burden that could not be effectively recovered.

GRE America continues to market, support and service the GRECOM branded scanners and is contractually committed to keep the Library Database updated and current. GRE America will continue to market, service and support Alinco’s radio products without any interruption.

We sincerely apologize for this unfortunate turn of events. GRE is proceeding to establish a contract with a new factory and believes it will be able to restart the manufacturing in the near future.

For continued sales, service and support, please contact the GRE America office.

Raj Gounder
Director of sales
GRE America, Inc.

I'm not familiar with your scanner, but there's usually a difference between auto-setting the "mode" (which is usually based on a guess made by the scanner according to an internal, pre-programmed table and not any kind of sophisticated DSP effort), and "searching" for whether the FM-like mode is Analog or P25, and what the CTCSS, DCS, or NAC might be.

And in the specific case of the VHF military spectrum between the aircraft band and 2 meters, there is a benefit, because the military uses both AM and FM on those frequencies. So you're better off telling it the right mode, especially in that band, if you know. [Of course, if you program it in AM and it's really FM, you'll still probably slope detect enough to hear something, and vice-versa by different means.]

...R

If you're looking for frequencies don't forget about the aviation itinerant frequencies. I heard air-to-air traffic today on:
122.75 around Houston Southwest AXH
122.775 around Porter and Lake Houston
123.35 mentioned Ellington
123.45
123.475
I can't confirm it's all related to WOH but you never know.

Other itinerants include 121.95 and 123.125-123.575.

I'm hearing a lot of Trbo that I wasn't hearing yesterday . . . .

<soapbox>
I worked as a communicator at the WOH last year. I was told that the air show has no unified command or EOC and no effective way for traffic to "cross nets", and listening to all the radio channels, I don't doubt it. [I hope they've fixed that this year, but I was told this would never happen.] As a result, much of the good that I was able to do was directly based on my being able to listen to the amateur net in one ear and all of the other nets (medical, logistics, police, guard, etc.) in the other. MANY things came up where I was able to bring something important to the amateur net for us to solve (e.g., the medical folks running out of batteries at one point, lost children reported to non-safety people, etc.) and vice versa that would not have happened had I not been able to listen to the other nets.

With the moves to non-monitorable staff radios and encrypted PD and FD/EMS radios, that ability has been effectively wiped out. The air show is a very good micro-example of what we lose when we prevent people from listening.
</soapbox>

27146. Poor Reception and Firmware

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-11-04 00:22:51 UTC
From: daysand16
Topic: 27146 Message: 27146

I have 2 Pro-106 Radios. Both radios had Firmware updates about 5 years ago. Both radios have the same antennas and are programed the same with the Win500 software.
Recently one of the Pro-106 reception has really dropped down.
Not sure how to get the reception back again, I reset the radio back to factory settings and was about to update the Firmware again.
But I am now getting confused about the different Firmware.
There is the:
PRO-106 (#2000106) and PRO-197 (#2000197) Digital Scanners (DSP Firmware Upgrade 1.4)
PRO-106 (#2000106) and PRO-197 (#2000197) Digital Scanners (CPU Firmware Upgrade 1.9)
PRO-106 (#2000106) and PRO-197 (#2000197) Digital Scanners (CPU Firmware Upgrade 2.0)
PRO-106 (#2000106) and PRO-197 (#2000197) Digital Scanners (CPU Firmware Upgrade 2.1)

Can somebody tell me in what order and how to install these Firmware Upgrades?
I sure hope after installing these Firmware Upgrades that I can the
reception back again,like the other Pro-106 I have.

These are notorious for broken antenna connections inside the unit. If you feel comfortable doing this, you could pop the case apart and see if it looks broken.

As far as the FW, just use the most current as they are cumula tive. The instructions will be in the downloaded file.

Guess someone didn't want to pay their ticket today.

27161. PSR-500 & PRO-106 Interface Cables and AC Power

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-11-09 21:35:53 UTC
From: daysand16
Topic: 27161 Message: 27161

Is there a difference in the USB/PC Interface Cables?

I have the Pro-106 and I have been using the Cable 20-047.

I just purchased the PSR-500 that uses the Cable 100-016.

Can I use just one of the USB/PC Interface Cables for Both scanners, or should I use each Cable to each Scanner?
Using the Win500 Software?

The PSR-500 Manual instructions say to First plug the AC power cord in to the PSR-500, Then plug the adapter in to the AC wall outlet.

I have always did just the opposite, with my Pro-106.

What Difference does it make in which way the AC power is attached to the Scanners?

From time to time I hear people who should not be on the police channels screaming or they will keep up and say 2 quick words that do not make any since. Any body else noticed this sounds like a prick with ham radio jumping on police channela like these pricks on cb radio saying dumb crap because they like hearing themselves talk??

27177. Bellaire PD & Fire New frequencies

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-11-15 09:54:26 UTC
From: Howard Bingham
Topic: 27177 Message: 27177

Does anyone know the frequencies that Bellaire, West U. & Southside Place use since narrow banding for PD & FD..?

Bellaire was supposed to change over to City of Houston for PD dispatching, as the city wanted to save the cost of erecting new transmission antennas (Per Houston Chronicle Reports several months ago.).

Also like to monitor West. U. & Southside Place PD & Fire, but can not locate the new frequencies, I believe both are on Harris County system, and do mutual aid with Bellaire PD & Fire..

Howard Bingham

Bellaire is still on UHF, PD 460.175 / FD 460.600 pl 167.9, I didn't know they were going to the Houston system. That system won't go online until the 1st of the year (some of the others on this group may have a better idea of exact date) and be aware the only radio at this time that will work on non-encrypted TG's is the PSR-800. As for WU & S.Side Pl. they are on Harris Co. TXWARN (analog) TX Med Center Site 029, check www.radioreference.com for the talk group numbers. These agencies do mutual aid together.
Hope this helps.

Bellaire will be going to the 700-800 houston system. However if they will be encrypted is still.up in the air. But they are going to have to have some kind of provision for the wreckers.

Most of the time it is an officer in scene keying up and someone is yelling or crying in the back ground or they pump their mic while on scene. It is the nature of their job and usually it's just an idiot shouting in the back ground.

Can't comment on the PD side but the fire side is still using their legacy channels.
Southside Place dispatches on 154.98/114.8 then goes enroute on their trunk channel. West University sporadically multicasts dispatches on 155.04/114.8.

Bayport secures two new cruise ship contracts
By Kiah Collier

Houston Chronicle
November 15, 2012
Updated: November 15, 2012 11:33pm

The only time cruise ships have called on the Bayport Cruise Terminal was for several weeks in 2008 after Hurricane Ike damaged the Port of Galveston. Since then, the 96,000-square-foot facility in Pasadena has sat empty.

It won't for much longer.

On Thursday, the Port of Houston Authority's governing board announced the cruise terminal's first-ever regular service in the form of two contracts with Princess Cruises and Norwegian Cruise Line, which used to call on a terminal at Barbours Cut but left in 2007.

The agreement with California-based Princess is for the 2013-2014 season with 27 planned departures; the agreement with Florida-based Norwegian begins in 2014 and spans for a total of 75 departures. The latter includes an option for a two-year extension.

Princess' inaugural trip on the 3,080-passenger Caribbean Princess, a benefit cruise to support veterans, is scheduled for Nov. 5-9, 2013. In the fall of 2014, Norwegian Cruise Lines will begin operating the 2,374-passenger Norwegian Jewel from Houston on week-long cruises to the western Caribbean.

"Securing this cruise business helps fulfill our commitment by building the cruise terminal to spur job creation and economic development for

the entire greater Houston and Pasadena region," Jim Edmonds, chairman of the authority's commission, said in a statement.

The release did not include financial details, but it estimated each cruise line will have a $50 million annual economic impact, including nearly $1 million in state and local tax revenue, according to economic consulting firm Martin Associates. Nearly 100 new jobs are predicted.

"Return to Houston'

Kevin Sheehan, the CEO of Norwegian, said in the Port Authority's release that the cruise line's expansion "into new homeports" is made possible by the addition of two new ships to its fleet, the Norwegian Breakaway and Norwegian Getaway.

"We listened to the feedback from our travel partners and guests who have been requesting our return to Houston," Sheehan said. "We are also going back in a big way by sending one of our Jewel-class Freestyle Cruising ships to their very impressive new cruise terminal."

The Bayport cruise terminal was used temporarily by Carnival Cruise Lines after Ike.

The otherwise empty terminal, which the authority spent $108.4 million building, has been cited by critics as evidence of financial waste and overspending. State Sen. John Whitmire, D-Houston, said it is one reason he authored an amendment calling for the authority to undergo review by the Texas Sunset Advisory Commission, which studies whether to abolish state agencies.

Harris County Judge Ed Emmett called the announcement "great news."

"I think this shows that the port is going the right direction," he said, noting that he was aware the authority's new executive director, Leonard Waterworth, had been working to find tenants for the terminal.

Waterworth, hired in April, said in May that he had been working actively to secure tenants for the terminal since being appointed on an interim basis in January.

That was after county officials criticized the authority for not disclosing that it had been in talks with the Military Sealift Command about housing naval support vessels there.

Whitmire said it's good the terminal will be used for its original purpose, but that he will "reserve judgment" until he sees the details of the agreement and return on investment.

Pay too much?

"I hope they didn't have to pay a cruise ship too much to come in there," Whitmire said, noting the high fuel cost for cruise ships to travel up the Houston Ship Channel rather than stopping in Galveston.

"It's supposed to be the other way around, you know."

The announcement follows a Tuesday vote by the Sunset Commission to recommend a total sweep of the authority's seven-member governing board and to take away local government's power to appoint replace- ments and give it to the governor.

Commissioners had little to say on the matter during their regular meeting Thursday when the authority's head of government relations gave a Sunset update, but they did ask some questions about the legislative process.

I haven't confirmed it's the blimp but someone has been using 121.95
in the last few days.

The blimp is using 121.95 with its ground crew (identifying as "zulu papa" as in N154ZP) but I haven't heard it since the game started.
The traffic on 450.75 [CSQ] appears to be the blimp.

-Eric

450.75 [CSQ] was the blimp, presumably working with the TV production truck.

From: Myles Barkman <kg5ai@comcast.net>
To: HoustonScan@yahoogroups.com
CC:

There is a major accident on I-10 between Winnie and Beaumont with what has been reported as 50 vehicles.

I think I’m hearing Atascocita VFD units on TG 20944 on scene.

As many as 80 ppl reported injured, traffic both ways supposed to be shut down.

I have this as KKBQ (Cox Radio) in my list. It is WQND562. I have a note that there is/was a phone patch on it.

http://wireless2.fcc.gov/UlsApp/UlsSearch/licenseFreqSum.jsp?licKey=3255368

I know, it’s not licensed as a repeater. Are you surprised something isn’t as it should be?

I saw that on your list, I was just hoping it was legal and I was overlooking the license.

Com-2 through Com-14 are already narrowband, and West I-10's UHF channels were narrowband from day one. Ditto for Atascocita's VHF paging channel. Com-15 (Westlake) is a little weak where I am but I'd be very surprised if it was still wideband. Com-whatever Cloverleaf uses might still be wideband.

Frequency spacing doesn't play into it, only whether the transmitter is operating at 5kHz or 2.5kHz FM deviation. For example, Cy-Fair has been narrowband for a year or two now but none of their frequencies or assignments changed.

That would be cool if they literally "fill it with dynamite and blew it up."

Wouldn't really be an implosion but sure would be exciting.

Just 6 years ago, it was apparently being renovated.

Winds from the cold front storms early this morning nearly blew my dual-band antenna to the ground. Only thing that saved it was the HF antenna running from the chimney to the fence. I just had some lashing wire holding the dual-band antenna to the top rung of the fence. *Real* bootleg. The wire was twisted around like you do to a loaf of bread and one side straightened out. I need to upgrade to at least half-ass.

Subject: [HoustonScan] cold front

Winds from the cold front storms early this morning nearly blew my dual-band antenna to the ground. Only thing that saved it was the HF antenna running from the chimney to the fence. I just had some lashing wire holding the dual-band antenna to the top rung of the fence. *Real* bootleg. The wire was twisted around like you do to a loaf of bread and one side straightened out. I need to upgrade to at least half-ass.

She didn’t really care. Didn’t tear anything up. Antenna isn’t up very high and can barely be seen from the street. I have a 30-ft telescopic mast that I used in Pasadena but elect not to use it until I’m assured they HOA can’t touch me. Really need that part of the deed restrictions removed.

I bet the HOA loves that.

I only had power surges that smoked some electronics in my house (the few things I didn't have surge suppression on).

I thought HOAs could not restrict antennas thanks to the FCC? People have
the right to receive television signals and amateur radio is a critical
part of our nation's communications infrastructure. But don't quote me.
I've never lived in a neighborhood with an HOA, even in Florida where
they're downright draconian.

HOAs are sort of like a certain German party circa WWII.

They can tell you your weeds are too high, that you have any weeds at all in your flower bed, that you need to cut your grass, that you need to clean the dirt off your garage/front door, that you need to get permission to put a shed in your back yard, or move your fence or change your fence style… Do you get the picture?

All under the guise of making sure you don’t lower property values and the overall appearance of the neighborhood.

But as long as you signed saying you would agree to all the rules, you must obey and agree to pay any annual dues or you can risk losing your house.

Oh, I know! And the ones in Florida make the ones in Texas look like charitable organizations! During the wildfires of 1998 people whose house had burned down were being fined daily by their HOAs for their lawn not being green.

Here's one story I enjoyed, but this was in the Atlanta area. It was a friend's parents' house. He cut down a diseased tree. The next day he had someone in his backyard measuring the stump. He confronted her and she said he needed permission to cut down trees of a certain size and promised she would act. She did. But he pointed out the HOA rules didn't specify how the tree was to be measured. Was it trunk diameter or circumference? He ended up winning.

Put a TV antenna on the mast. They can't touch you. Supreme Court ruling. :)

The a$$wipe Texas legislator that pushed that law through owns an HOA management company.

Conflict of interest, ya think?

The idea that an entity created to protect your home can take it away is just wrong.

When they fully switch off of the old system they will not need the large antenna.

Great opportunity to go back to the old system! I don't want trunking and neither do they!!!

Then maybe we can hear something without a multimillion dollar motorola radio! Let's start a campaign to call the Mayor and get this new mess cancelled before somebody gets hurt.

Of course, it would be nice if they had actually taken a picture of a police radio and not a fireman...but that is just me.

With the plans that Houston has to abandon UHF after the transition, who's to say they can't go to the 700/800 & GPS only APX antenna's which would shorten it by a bunch.

Thank You,

Funny you should mention that, as I just came across a rack of UHF SpectraTAC receivers on eBay...
http://www.ebay.com/itm/MOTOROLA-RADIO-STATION-CABINENT-W-SPECTRA-TAC-VOTING-UNITS-46-H-X-22-W-X-15-D-/170943164335

It is no more. It is being merged into 1A7 as expected. It should reappear as site 3-5 on 1A7. The public works users will be on the public safety sites in the meantime.

Well, it frustrates me to see all this nostalgia for a UHF system that has been fraught with its own issues from the git-go whether you looked at it as a user, a scanner enthusiast, or an administrator/technician. The new system has its own issues, but it at least has the potential to better serve its actual constituents.

Well I can monitor the UHF system just fine, and 3D8 was 5 bars at my location. Not so much with 1A7. I hope that once the whole changeover is in place, my reception will somehow improve due to better/stronger/more something or other. Do ya think?

Finally got around to bumping the firmware on my 800 for Phase II.
Here's what I've noted so far (off the NW Simulcast):
-The talkgroup listed as HPD North Shepherd Patrol (30001) is active
with heavy encryption, but doesn't appear to be patched to 460.325.
-Looks like Memorial Village FD has fully transitioned to t/g 31009. No
patching noted to 453.325.

Still trying to figure out how to lock out talkgroups in a wildcard
search.. these public works guys are driving me nuts.

It appears that the Toyota Center operations have moved to MotoTRBO digital. The FCC license appears to still be narrow-band analog (11K2F3E), but they have Motorola XPR6550 radios and I'm hearing TRBO digital on 452.4500 MHz. Not sure if they are still trunked or not. I'm not familiar with the TRBO trunking modes...

Per a Houston Chronicle (Bellaire neighborhood section.) story several months ago, both Bellaire FD & PD will be moving to Houston channels after new narrow band equipment is installed in city vehicles..

Supposedly this will include HT radios for field use..

2121 Cherrybrook is the admin building, and there are no big towers over there (there is, however, a 30' pushup pole next to the building on the PD dispatch side with a couple of fiberglass antennas on it.) Note also the 25W max ERP and 20' HAAT.

27316. New federal frequencies in Houston

Yahoo group: HoustonScan (2012 — 2013)
Date: 2012-12-16 19:10:18 UTC
From: Eric C. Carlson
Topic: 27316 Message: 27316

Some new federal frequencies popped-up last week in Houston:
170.2625 NAC 293
172.7 NAC 293
173.05 NAC 293
Almost all of the activity on these was between 1:00 AM and Noon on
12/12. It was all encrypted. I got one hit on 170.2625 NAC 293 on
each of 12/9 and 12/11 also.

Overheard RSI protocol on CCEMS and am wondering what it is. Also noticed in the Chronicle an article stating that ESD 24 is acquiring land for a new Fire Station. Anyone know which VFD they are associated with?

Thanks

RSI stands for rapid sequence induction. It is a procedure to medicate a person in order to relax them enough to place a breathing tube in to their lungs. This is done when the airway is compromised or the patient is loosing the drive to breathe on their own.

As far as drugs go it depends on the protocol, but most EMS services I have seen give Versed to sedate and then Succinylcholine to paralyze the patient. In the ER I work in we use Etomidate for sedation and then follow it up with Succinylcholine. Succs is short acting so after the patient is intubated they usually give norcuron to keep them paralyzed...

Being an old timer, native Houstonian, I remember when AM radio station KNUZ, 1230, had a roving news car they called Big Mike that would go to breaking news areas and make on the scene reports. The car had a large plastic yellow microphone mounted on top. KNUZ and KTRH were the top news stations in Houston back in the 50's. gary

KEYE-TV 42 in Austin used to carry Retro TV on one of their subchannels. It was all of those great shows: Emergency, Adam 12, Dragnet, Rockford Files, etc. Unfortunately the replaced it with something else shortly after. :-(

One thing that most people are not aware of, when the PD got new cars, they would buy new radios. The FD also did this.

They would install the FD or PD radios in your personnel car. I believe that you also got a radio number.

This was a small little thing that the politicians would do for friends. This is why there was a lot of 2-way radios in private vehicles all around the city.

I worked for Circle Communications in Ft Worth until the U.S. Army disrupted my life in 1965. I was the one elected to dig a radio out of the rear seat well of his station wagon whenever a repair was needed. We had the antenna for the TCSO and several others behind the building, and I've been broke ever since buying scanners.

From: Ed Lentz
Topic: 27320 Message: 27355

Vester had several folks out taking photo's of accidents so he could sell the pictures to insurance companies. I got to know him when he was already out of the business, he died a few years back and was in his late 80's. A character from the stories that I hear. Had a radio license and radio system on VHF low band over on Jean Street I think.

Times have really changed things over the years. Garvin Berry and Marvin Zindler were some of the first street reporters back when there were still news people. No, they didn't have boobs but they could dig out a real story and it was presented over the air just the way it was.

I found one of the photo's of the Channel 2 remote broadcast unit the other day, looked like a red bread truck.

I still have a copy of the 1997 “Texas Frequency Database”. Think it came off the Acom BBS. I have it named acomtexas.txt.

Still check it out every once in awhile.

Vester had a photographer by the name of David White, I use to ride with David on Saturdays.
Vester was one of a kind but knew his business, I kept in touch with hin over the years and his wife told me thathe was cremated and is in Phoenix. His daughter lives their. I got to know him very well.

From: speedrcr78
Topic: 27363 Message: 27363

I was passed this information and I would like to share it. The following are supposed to be the talkgroups that are going to be on the Public Works systems for wrecker drivers, media, scanner enthusiasts, etc. I have not verified this so take it as you will.

North Shepherd 30300
North East-30301
South East-30302
Southwest-30303
Citywide-30304
Central-30305
Special Ops-30306
Dectective-30308
South Central-30307
Northwest-30309
Westside-30310
HPD-b3-30311
HPD IAH-30312
HPD Nine-30314
HPD Hobby-30315
HFD-a1 44980
HFD TAC6-44985

The agreement to multicast was between tow truck owners and HPD so that the freeways could be cleared as fast as possible. Like it or not HPD and COH understand the need to make this happen.
Since the PSR-800 may be a great scanner for most on this group, ibecause of its small size, low audio output, lack of mounting system, and power supply options not to mention difficulty operating and seeing while driving a truck in Houston traffic, I don't see it being a solution to the original problem and reason for the need to multicast.
And if you think people getting angry is funny, you've got a problem to start with, just saying. Bless your little heart

The PSR800 actually handles talkgroup hold a lot better than more advanced scanners.. mainly, it won't drop back into ID Scan if it loses the control channel. The low audio output can easily be mitigated with an amplified speaker (the Moto speakers made for the Mostar, and later the XTVA, work great for this) and Pro-Clip makes a surface-mount belt clip holder that works with the stock belt clip and will hold it securely in a mobile install. For a multiple-radio power distribution solution, Google "industrial USB hub."

Or, y'know, instead of guys running around with 20-plus radios in their trucks, they could monitor from their office and dispatch via cellphone, radio, or whatever.. or better yet, why not get a bunch of the bigger companies to pool their resources and open a central dispatch office that other companies can pay a monthly subscription fee to? As a retired LEO put it to me a while back, the cowboy days are coming to an end. I would think the fact that so much of the new system is going to be encrypted would be a pretty clear indicator of the direction that things are going, but that's just, like, my opinion, man.

No, both the PD & FD still using the old sytem..

Guess I'll need to get a new scanner to monitor PD & Fire calls, guess West. U. is on the County Talkgroups, as I haven't heard either West U. or Southside Place in a long time..

My understanding is that Southside FD will have their own TG on the COH system and will still keep their existing TG on TxWARN. I would guess that the same would go for Southside PD and West U.

Just heard Southside Place fire tone out on their old VHF channel (154.98/114.8) earlier this evening. No clue about the 800 side. They used to be active on the Medical Center site with West University.

The COH Public Works is a part of TXWARN now so Southside Place wouldn't need a separate talk group they would just need access to the city of Houston's Tower if I'm not mistaken

Are you saying that the PSR-600 will receive System 1A7 (TxWARN P25), Site 3-005 (Houston Public Works Simulcast)? Since the 600 doesn't receive Phase II, it would be great news if Public Works was going to be Phase I after HFD & HPD move.

Yes, they will be simulcast in Phase I on the public works.

Subject: [HoustonScan] Re: HFD. & HPD

Are you saying that the PSR-600 will receive System 1A7 (TxWARN P25), Site 3-005 (Houston Public Works Simulcast)? Since the 600 doesn't receive Phase II, it would be great news if Public Works was going to be Phase I after HFD & HPD move.

You make a good point. My newest PSR-500 won't be staying long. The power receptacle on those things is simply too fragile for continuous use. One of the selling points for the PSR-800 to me was its ability to be USB-powered. My wheelchair is always powering one of my laptops so an USB port is readily available.

I got a look at the new mobiles in one of the trucks last week.. looked
like a Harris M7300:
http://www.pspc.harris.com/Mobile/M7300.asp

Date: 2013-01-01 23:19:01 UTC
From: Howard Bingham
Topic: 27308 Message: 27427

Bellaire FD is still on regular FD channel, guess they kept the old frequency, but went narrow band, as I have been hearing them well into New Years day...

The Bellaire PD frequencies nothing but un-intelligable hash, so locked them out, they must be encrypting transmissions as previously noted.. (My scanner not capable of "talk groups" & frequencies in 700 & 800 mhz bands.)

Guess I'll eventually have to up-grade to a newer table-top scanner with digital capabilities, any suggestions...?

Happy New Years..2013

Howard Bingham

The talkgroups from 3D8 are merged into 1A7 on RR.
http://www.radioreference.com/apps/db/?sid=4563
The cut-back-over to site 3-5 for public works is still pending but
you should hear them on the public safety sites for now.

The license modification he's referring to is here:
http://wireless2.fcc.gov/UlsApp/ApplicationSearch/applMain.jsp?applID=7237947
On the surface, it looks like a whole separate simulcast ring built
partly on existing Houston towers with 800 frequencies culled from the
2318 site and the old downtown site channels that were later merged into
Allied. But who knows, it may get merged into an existing simulcast layer.

The microwave dishes are for the City microwave ring. The VHF antenna
will almost certainly be for the fire paging system on 154.01, which was
supposed to get relocated to a water tower on the fairgrounds complex.
The UHF antenna is a source of speculation.. could be anything from a
SCADA/telemetry system to a new siren alerting system to a TRBO system
for public works.

I have both 460.175 and 465.175 on scanner (Don't know anything about "talkgroups", that's Greek to me.).

Guess I ought to get some up-dated equipment, as I still have an old E.F. Johnson VHF crystal controlled scanner with HPD, Bellaire & West U.'s old VHF frequencies stashed in my closet (Wonder if there is any use for old crystal controlled scanners..? Guess I ought to dig it out & plug into a power supply to see if it still works.).

Ok, I guess I have to share something I learned two weeks ago at Houston Amateur Radio Supply. The owner, Dave, knows two hams who work in HPD's radio shop, and the latest word is that Motorola has been UNABLE to get TDMA working for HPD and HFD. I kid you not. Tempers are running very frayed, and a third-party vendor has been hired to try to get things going. The best guess now is maybe June or July.

Ok, I guess I have to share something I learned two weeks ago at Houston Amateur Radio Supply. The owner, Dave, knows two hams who work in HPD's radio shop, and the latest word is that Motorola has been UNABLE to get TDMA working for HPD and HFD. I kid you not. Tempers are running very frayed, and a third-party vendor has been hired to try to get things going. The best guess now is maybe June or July.

I thought the depts were going to switch to the new system starting January 1st.
Does anyone know when the switch will take place? I'm still using old scanners.
Thanx in advance,
-Steve

Let me spell it out. HPD has flunked TDMA and is currently paying the $10K/mo. fine to the FCC for regular FM channels. No wonder HPD is pissed. TDMA isn't the nirvana Motorola promised.

As for those other agencies, can you say "suckers"?

So the APX radios they bought aren't even narrowband capable?

Maybe they should have bought EFJ radios.

Well consider: Those fancy radios also do FDMA. If HPD really thought TDMA was around the corner, why wouldn't they save $10K/mo. and temporarily go FDMA while Motorola gets its TDMA act together? Answer: TDMA is a very fragile protocol; if a few bits go bye-bye, a voice doesn't just get garbled, transmissions get lost and people could die. Bottom line: TDMA needs even higher signal density than digital FDMA.

I have a friend who used to know a Dallas officer and he says that he was told by their old Moto rep that the City are cancelling the contract effective Jan. 1. It is on the city meeting list for next week. As soon as that is done they will onnounce that the fire and police are goning with the Electric Company (Reliant?) on their new system. There will be no encryption but the streets people will stay on the Moto system like they are now. This is reliable information but not public yet.

Sounds like our calls and letters to the mayor have had some results!

Do you have anything other than hearsay to back up this $10k a month claim? Also several HPD officers I have seen on the street are still carrying their old UHF sabers. Why has this not been on the news or listed on any FCC website?

TDMA is not nearly as fragile as people thing nor is it new. The cellular industy has been doing TDMA based air interfaces for quite some time now as well has been used in wireline based telecom for decades. As for signal density, I would hope that 48 towers in the county would provide sufficent coverage be it TDMA, FDMA or whatever air interface is being utilized.

A lot of them are not using sabers either. They are using these really small radios that they strap in their old holsters for the sabers. It looks kind of funny. Pretty much all the cars have either xtl's or the apx's.

Connected by DROID on Verizon Wireless

That would be Vertex radios 16 channels Alpha display. Less than $250 per radio. Also Puk-sing. Not how it is spelled but how it is pronounced in English, made in China and sells for under $75 on the Internet .

Would the media understand the issues?

Yes, cellular does use TDMA, but not as repeaters. A dropped call is no big deal, happens all the time. A dropped "assist" request? Hmm, you tell me.

Of course the old UHF stuff is still issued, guess where the new stuff is.

You still did not answer my question. Do you have anything other than heresay regarding the HPD 10k a month fine.

Its a simple yes/no question really. I would like to read more about it from a reliable source. FCC enforcement actions are publc notice, yet there isnt a peep about houston getting any kind of fine.

just curious.

If it was just a rumor from someone you know, then thats all well and good too.

As for the $10K/mo., read the FCC edict that FM be vacated.

That would be Vertex radios 16 channels Alpha display. Less than $250 per radio. Also Puk-sing. Not how it is spelled but how it is pronounced in English, made in China and sells for under $75 on the Internet .

Are you sure they do not have an FCC narrowband waiver? I know one was applied for. If they were successful in persuing a waiver, they would be allowed to run 25khz FM up to the date allowed for in the waiver. Some cities have been granted over a year to be compliant with 12.5kHz. Looking at the waiver criteria, i would say HPD/HFD should be successful in having a waiver granted.

Also the proposed narrowband fines were $16k per day, per offense (up to $112k)

http://fcclicenses.blogspot.com/2012/08/fcc-may-fine-up-to-112500-for.html

As for specific fines, There have not been any FCC licensees as of today that have been issued a NAL related to failure to narrowband. I am sure there will be some coming, but none have been issued (including HPD).

I have a friend who used to know a Dallas officer and he says that he was told by their old Moto rep that the City are cancelling the contract effective Jan. 1. It is on the city meeting list for next week. As soon as that is done they will onnounce that the fire and police are goning with the Electric Company (Reliant?) on their new system. There will be no encryption but the streets people will stay on the Moto system like they are now. This is reliable information but not public yet.

Sounds like our calls and letters to the mayor have had some results!

Yes, cellular does use TDMA, but not as repeaters. A dropped call is no big deal, happens all the time. A dropped “assist” request? Hmm, you tell me.

Of course the old UHF stuff is still issued, guess where the new stuff is.

First they are complaining about the antennas. Then they say there is a delay from the time they key up until they are able to talk. Then there is a delay from the mobiles to the portables. A lot of them wear the ear pieces for the mobile radios. So they will talk on their mobiles then a couple seconds later hear themselves on the handhelds.

I agree on the antennas. On the delay before you talk, welcome to trunking. On the audio, welcome to digital. So no coverage\performance issues, that's what I was wondering about. ----- Original Message ----- From: gjhamilton@... Give it up. Some people just aren't interested in "facts" and "verified information."

I see this argument come up time and time again on Radioreference, all over the country. What it always boils down to is "Change is coming! Change is scary! We don't want change!"

Face reality, folks. Even if there were a TDMA issue or some software issue, the city would pour how many ever millions of dollars it took to fix it into the problem. If the end users howl about this issue or that issue, the city will make token gestures to resolve them, then eventually foist the equipment on them whether they like it or not. And over time they'll grow accustomed to the quirks of the new system, and eventually come to accept it and maybe even realize what a vast improvement it is over the old system. It happens all the time, all over the country.

But hey, with the onset of winter I have enjoyed the warmth of a good flame war.

27486. RE: [HoustonScan] HFD/HPD Switch ?

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-01-04 16:46:30 UTC
From: Scott Royall
Topic: 27443 Message: 27486

In little Bellaire?

From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of Kevin Chessher
Sent: Friday, January 04, 2013 08:50
To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] HFD/HPD Switch ?

I agree on the antennas. On the delay before you talk, welcome to trunking. On the audio, welcome to digital.

So no coverage\performance issues, that's what I was wondering about.

From: gjhamilton@...

Subject: Re: [HoustonScan] HFD/HPD Switch ?

First they are complaining about the antennas. Then they say there is a delay from the time they key up until they are able to talk. Then there is a delay from the mobiles to the portables. A lot of them wear the ear pieces for the mobile radios. So they will talk on their mobiles then a couple seconds later hear themselves on the handhelds.

I thought the depts were going to switch to the new system starting January 1st.
Does anyone know when the switch will take place? I'm still using old scanners.
Thanx in advance,
-Steve

Give it up. Some people just aren't interested in "facts" and "verified information."

I see this argument come up time and time again on Radioreference, all over the country. What it always boils down to is "Change is coming! Change is scary! We don't want change!"

Face reality, folks. Even if there were a TDMA issue or some software issue, the city would pour how many ever millions of dollars it took to fix it into the problem. If the end users howl about this issue or that issue, the city will make token gestures to resolve them, then eventually foist the equipment on them whether they like it or not. And over time they'll grow accustomed to the quirks of the new system, and eventually come to accept it and maybe even realize what a vast improvement it is over the old system. It happens all the time, all over the country.

But hey, with the onset of winter I have enjoyed the warmth of a good flame war.

WTH were you thinking? You NEVER ask simple questions unless you
expect flame wars, name calling, and hurt feelings!

;-)

From: Scott Royall
Topic: 27443 Message: 27493

Yep, the only undeniable fact is there's been no switch yet.

Subject: Re: [HoustonScan] Re: HFD/HPD Switch ?

Give it up. Some people just aren't interested in "facts" and "verified information."

I see this argument come up time and time again on Radioreference, all over the country. What it always boils down to is "Change is coming! Change is scary! We don't want change!"

Face reality, folks. Even if there were a TDMA issue or some software issue, the city would pour how many ever millions of dollars it took to fix it into the problem. If the end users howl about this issue or that issue, the city will make token gestures to resolve them, then eventually foist the equipment on them whether they like it or not. And over time they'll grow accustomed to the quirks of the new system, and eventually come to accept it and maybe even realize what a vast improvement it is over the old system. It happens all the time, all over the country.

But hey, with the onset of winter I have enjoyed the warmth of a good flame war.

On 1/4/2013 7:48, Kevin Chessher wrote:

"Of course the old UHF stuff is still issued, guess where the new stuff is."

I don't know, where?

"Would the media understand the issues?"

Never stopped them from reporting before.

Would the media understand the issues?

Yes, cellular does use TDMA, but not as repeaters. A dropped call is no big deal, happens all the time. A dropped “assist” request? Hmm, you tell me.

Of course the old UHF stuff is still issued, guess where the new stuff is.

Subject: [HoustonScan] Re: HFD/HPD Switch ?

Do you have anything other than hearsay to back up this $10k a month claim? Also several HPD officers I have seen on the street are still carrying their old UHF sabers. Why has this not been on the news or listed on any FCC website?

TDMA is not nearly as fragile as people thing nor is it new. The cellular industy has been doing TDMA based air interfaces for quite some time now as well has been used in wireline based telecom for decades. As for signal density, I would hope that 48 towers in the county would provide sufficent coverage be it TDMA, FDMA or whatever air interface is being utilized.

Any idea who the "third-party vendor" is? Maybe it's Harris since
OpenSky is TDMA also. :-P

HFD's command van was on the 6:00 ABC13 news in a story about the race.
Looked like a bunch of APX7500s and a rack of UHF XTS5000s in the back..
no hammy stuff.

27526. HOU Airport tower/freq

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-01-12 04:37:05 UTC
From: albertorea
Topic: 27526 Message: 27526

I notice on the upper lever of the airport drop off there are quite a few antennas, I noticed a big newish(maybe installed last year) antenna behind the fire dept on airport...Who is using that? I didn't see any HOU talkgroups but one or two on TXwarn yet that site isn't on any maps/charts..

27533. HCSO-Southwest-A

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-01-14 03:35:09 UTC
From: speedrcr78
Topic: 27533 Message: 27533

I am trying to understand how this channel works. Sometimes you can hear it on the Clodine tower, and sometimes you can hear it on N. Gessner tower. Today I could not hear it on either tower. But I know it was active since I could hear it on 1A7. Anyone else noticed this? And how can I monitor it reliably on 2318?

Thanks in advance.

I am not down there, so maybe someone who knows that system better will chime in, but it may be due to affiliation. Most multi site trunkiing systems are designed to deliver the audio only where it is needed. If there are no system radios affiliated to a certain tower, the talkgroup won't be broadcast on it, and your scanner (if scanning that tower) will not pick up the talkgroup.

Yeah that's what I thought I set up a scan list with the channel in two different towers. One of which was very close to where they were working .

It gets even trickier with Smart-X, if no radio is affiliated to theTG on the 2318 site you won't hear it even if a radio is affiliated to the 1A 7 site at the same tower.

Hpd chase on Northwest channel

27540. Montgomery County Firecom

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-01-16 20:32:15 UTC
From: Josh W.
Topic: 27540 Message: 27540

Looks like Firecom has changed their channel plan again. 1A7 appears to be the primary response system now with the VHF links on FD 1, 2, and 3 still active. FD4 and FD5 are also being used for fire response, but have no VHF links. The VHF tac channels have been assigned new channel names, with "FD x" being the repeated channel and "Tac x" being the simplex talkaround channel.

FD 10/Tac 10 - old Tac North (155.19/DPL 072)
FD 13/Tac 13 - old South County Fire 1 (154.355/146.2)
FD 14/Tac 14 - old Tac South (155.04/DPL 114)

Tac East and Tac West are presumably FD 11/Tac 11 and FD 12/Tac 12, unknown if respectively. Don't know where FD 6 through FD 9 are; they may be as-yet undiscovered talkgroups on 1A7.

27541. Re: [HoustonScan] Montgomery County Firecom

FD 11 is old Tac East. Just need to confirm FD 12/Tac West now.

SOP for structure fires now seems to be FD 5 for response, then switch
to a VHF simplex tac for fireground.

FG10 thru FG16 are the VHF simplex FireGround.
TAC10 through TAC16 are repeaters.
FG9 and TAC9 are future.

MCFD1 thru MCFD3 are VHF Simulcast, TxWARN, and MCHD EDACS.
MCFD4 thru MCFD8 are TxWARN.

Thank You,

27551. PSR-800 Update

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-01-17 21:48:49 UTC
From: Kevin Chessher
Topic: 27551 Message: 27551

New U1.8 firmware is available for the PSR-800, via the EZ Scan Digital software update feature.

Version U1.8 - January 15, 2013
Added ability to decode APCO Project 25 Phase 2 TDMA voice channels. This version must only be used in conjunction with DSP firmware version U1.3 or later.

When this version is installed, the uP Appl Ver line on the version screen (accessed by pressing the MENU when the welcome message is displayed after a power up) will show as version 1.8.

When a Phase 2 talkgroup is active, the scanner will display "D2" instead of "DG".

We recommend ensuring the sites on a P25 Phase 2 system be set to Auto-Fill mode. This will allow the scanner to automatically set the information needed to track the system from the control channel data stream. Don't use "custom tables" for Phase 2 systems unless you really know what you're doing.

Added support for decoding of radio ID and priority channel detection since the release of Beta 2.

Fixed issue in the Beta 2 versions with the scanner not returning to the control channel when a Phase 2 transmission ends when the other time slot is in use on the same frequency.

From: Eric Deering
Topic: 27553 Message: 27553

Just heard what sounded like a robo dispatch on tg 1996 on the Conroe Edacs system. I guess it will be for Conroe FD and/or MCHD dispatch.

From: Eric Deering
Topic: 27554 Message: 27554

I take back my previous message. Now it sounds like the robo dispatch is toning out real calls on that 1996 group. Guess it is testing.

New U1.8 firmware is available for the PSR-800, via the EZ Scan Digital software update feature.

Version U1.8 - January 15, 2013
Added ability to decode APCO Project 25 Phase 2 TDMA voice channels. This version must only be used in conjunction with DSP firmware version U1.3 or later.

When this version is installed, the uP Appl Ver line on the version screen (accessed by pressing the MENU when the welcome message is displayed after a power up) will show as version 1.8.

When a Phase 2 talkgroup is active, the scanner will display "D2" instead of "DG".

We recommend ensuring the sites on a P25 Phase 2 system be set to Auto-Fill mode. This will allow the scanner to automatically set the information needed to track the system from the control channel data stream. Don't use "custom tables" for Phase 2 systems unless you really know what you're doing.

Added support for decoding of radio ID and priority channel detection since the release of Beta 2.

Fixed issue in the Beta 2 versions with the scanner not returning to the control channel when a Phase 2 transmission ends when the other time slot is in use on the same frequency.

Inexpensive an good are jot on the same spec sheet. My son has had a few Baofeng UV-5R radios. They have worked pretty well. They are about 45 bucks on the Internet but I would suggest getting one from www.aaradio.com so you have some support of needed. For a little more you can get a Wouxun KG-UV6D. I have had that the longest and have not had any issues with it. They were good radios for him until he got a Motorola APX7000 and now he won't have anything to do with them. :-)

Check out www.aaradio.com and see what deals they are running.

If you were wanting to spend a bit more than super dirt cheap Chinese, the Kenwood TH-F6A is a respectable starter rig. https://www.hamcity.com/store/pc/TH-F6A-p855.htm They are very popular up in my parts. Tons of accessories out there for them, and I think the software is free. Eham.net has a decent review page if you want to look at reviews for various models. http://www.eham.net/reviews/products/49 Good luck on your test.

Subject: Re: [HoustonScan] good portable dual band?

Inexpensive an good are jot on the same spec sheet. My son has had a few Baofeng UV-5R radios. They have worked pretty well. They are about 45 bucks on the Internet but I would suggest getting one from www.aaradio.com so you have some support of needed. For a little more you can get a Wouxun KG-UV6D. I have had that the longest and have not had any issues with it. They were good radios for him until he got a Motorola APX7000 and now he won't have anything to do with them. :-)
Check out www.aaradio.com and see what deals they are running.

414.5625 NAC 168 encrypted and active all day, monitored from downtown, 9:00 AM to 7:00 PM. I think someone proposed on RR that this might by Postal Service OIG. I am relatively close to the downtown processing and distribution center. The Postal Inspector office is also nearby.

From the Harris County Commissioners Court agenda for January 29:

Request for approval of agreements with Paramed EMS and Houston Baptist University for use of the county’s 800 MHz public radio system.

Harris Corporation, RF Communications Division; and Motorola Solutions, Inc., best proposals meeting requirements for multi-band subscriber radios for
the county for the period of January 29, 2013-January 28, 2014, with four one-
year renewal options, and for the County Judge to execute the agreements.
m.

E.F. Johnson Company; Motorola Solutions, Inc.; and Relm Wireless Corporation best proposals meeting requirements for Harris County Public Safety Project 25 subscriber radios for the period of January 29, 2013-January
28, 2014, with four one-year renewal options, and for the County Judge to execute the agreements.

I'm listening to Tomball, Clodine other west metro area sites.

I might add that I am still hearing a lot of traffic on 2318, just not HCSO traffic. I am right now listening to some Cnstbl Pct 5 Criminal TG traffic on 2318.

27606. RE: [HoustonScan] 2318

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-01-25 17:22:47 UTC
From: Scott Royall
Topic: 27589 Message: 27606

I beg to differ. As of last night, HCSO was exclusively 2318 on my PSR-500 and -800. I just rechecked and it's still true. 1a7 is full-scale but silent here, and has been for at least a week.

From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of speedrcr78
Sent: Friday, January 25, 2013 09:18
To: HoustonScan@yahoogroups.com
Subject: [HoustonScan] 2318

It seems that HCSO is no longer on 2318. Looks like they have moved to 1A7.

Date: 2013-01-25 17:36:06 UTC
From: Rusty Caufield
Topic: 27589 Message: 27609

The HCSO talk groups are both 2318 & 1A7, and the sites ONLY broadcast audio when a subscriber radio is affiliated with that site and only on the talk-group's the subscriber's affiliated on that site have selected.

Others words the sites only broadcast traffic when they need too.

I beg to differ. As of last night, HCSO was exclusively 2318 on my PSR-500 and -800. I just rechecked and it's still true. 1a7 is full-scale but silent here, and has been for at least a week.

Ok, but it got you looking in the proper area at least.

Thinking about it, even on the Houston simulcast (site 52) you should have heard HCSO.

Memorial Village PD & Fire (fire is not multicast on UHF)
Hedwig Village PD
Spring Valley PD
Spring Branch ISD PD
Been hearing a lot of console alert tone testing on the HPD and HFD
talkgroups as well.

RFSS 3. When you look at the TxWARN digital system page on Radioreference you'll see RFSS numbers next to the site numbers. RFSS 1 and 2 are the "county" system and carry HCSO, constables, Metro, and all the "county system" users. RFSS 3 is the new "City" system and carries Houston city traffic along with the new users who joined with them (Bellaire, the Villages, etc.) Talkgroups and radios don't roam between 1/2 and 3 aside from a handful of interop channels. In all actuality you're dealing with 2 separate systems that just happen to share a SID and WACN.

27630. RE: [HoustonScan] 2318

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-01-26 04:23:09 UTC
From: Scott Royall
Topic: 27589 Message: 27630

Nobody said RFSS. J

Yeah, it's much like virtual networks. I’m just surprised the sites are tied to specific RFSS. Should be by talkgroup.

It seems that HCSO is no longer on 2318. Looks like they have moved to 1A7.

27635. Re: [HoustonScan] 2318

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-01-26 05:10:51 UTC
From: Rusty Caufield
Topic: 27589 Message: 27635

Talk groups are setup with restrictions to certain Zone (RFSS) and sites within a zone.

So as with some of the TG's they are allowed to broadcast on their specific sites ie. Huffman, IAH, Beltway Simulcast, and Ames. But not able to broadcast on Montgomery Simulcast, East Walker, Moss Hill, or any sites in Zones 2 & 3.

Radio ID's can be restricted the same way.

RFSS 1 and 2 are the "county" system and carry HCSO, constables, Metro, and all the "county system" users. RFSS 3 is the new "City" system and carries Houston city traffic along with the new users who joined with them (Bellaire, the Villages, etc.) Talkgroups and radios don't roam between 1/2 and 3 aside from a handful of interop channels. In all actuality you're dealing with 2 separate systems that just happen to share a SID and WACN.

27638. RE: [HoustonScan] 2318

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-01-26 12:41:59 UTC
From: Kevin Chessher
Topic: 27589 Message: 27638

Are you sure about that?

27639. RE: [HoustonScan] 2318

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-01-26 12:49:10 UTC
From: Kevin Chessher
Topic: 27589 Message: 27639

One reason for doing this is channel capacity. If every dispatch TG was allowed at every site the chance of getting "busys" would be greatly increased. Which for mission critical communications is a bad thing.

27640. RE: [HoustonScan] Re: 2318

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-01-26 12:53:22 UTC
From: Kevin Chessher
Topic: 27589 Message: 27640

On a scanner you won't as they give no indication of this.

27641. Re: [HoustonScan] Re: 2318

Yahoo group: HoustonScan (2012 — 2013)

27642. Re: [HoustonScan] 2318

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-01-26 15:26:03 UTC
From: Rusty Caufield
Topic: 27589 Message: 27642

And we already get busy's on MCFD 1-3 and MCSO 1-6 because users are affiliating on Tomball, Huffman and Walker East along with everyone else already on those sites.
If they got sucked into the mix across the whole system we'd never be able to talk on our dispatch TG's, in order for the TG's to be forced to broadcast on every site, every site would need to have hundred's of frequencies.

Thank You,

Rusty Caufield, KD5RXY
Cypress, TX

27645. RE: [HoustonScan] 2318

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-01-26 17:51:42 UTC
From: Scott Royall
Topic: 27589 Message: 27645

Well, yes and no. The actual number of radios on a TG is what drives affiliations, or at least it should. If your TG has jurisdiction for an area, it should be universally available.

To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] 2318

Talk groups are setup with restrictions to certain Zone (RFSS) and sites within a zone.

So as with some of the TG's they are allowed to broadcast on their specific sites ie. Huffman, IAH, Beltway Simulcast, and Ames. But not able to broadcast on Montgomery Simulcast, East Walker, Moss Hill, or any sites in Zones 2 & 3.

Radio ID's can be restricted the same way.

Never noticed it was in site trunking.

27647. Re: [HoustonScan] 2318

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-01-26 18:08:45 UTC
From: Rusty Caufield
Topic: 27589 Message: 27647

No, radios affiliate on the control channel and monitor the CC for what RF channel to switch to to receive a message.
If the site only has 5 RF working channels and needs to broadcast 6 messages at the same time, the TG that last requested a RF channel or has the lowest priority is going to get a busy on every site it needs to broadcast until an RF channel is available at every site.

Thank You,

Rusty Caufield, KD5RXY
Cypress, TX

Talk groups are setup with restrictions to certain Zone (RFSS) and sites within a zone.

So as with some of the TG's they are allowed to broadcast on their specific sites ie. Huffman, IAH, Beltway Simulcast, and Ames. But not able to broadcast on Montgomery Simulcast, East Walker, Moss Hill, or any sites in Zones 2 & 3.

Radio ID's can be restricted the same way.

27651. RE: [HoustonScan] 2318

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-01-26 18:20:30 UTC
From: Kevin Chessher
Topic: 27589 Message: 27651

You people are so smart.

27652. RE: [HoustonScan] 2318

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-01-26 18:28:29 UTC
From: Scott Royall
Topic: 27589 Message: 27652

Also happens with dedicated frequencies. Demand is a spiky concept, supply isn’t.

To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] 2318

No, radios affiliate on the control channel and monitor the CC for what RF channel to switch to to receive a message.

If the site only has 5 RF working channels and needs to broadcast 6 messages at the same time, the TG that last requested a RF channel or has the lowest priority is going to get a busy on every site it needs to broadcast until an RF channel is available at every site.

Thank You,

Rusty Caufield, KD5RXY

Sent: Saturday, January 26, 2013 06:49
To: HoustonScan@yahoogroups.com
Subject: RE: [HoustonScan] 2318

One reason for doing this is channel capacity. If every dispatch TG was allowed at every site the chance of getting "busys" would be greatly increased. Which for mission critical communications is a bad thing.

So much for true roaming.

From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of Rusty Caufield
Sent: Friday, January 25, 2013 23:11
To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] 2318

Talk groups are setup with restrictions to certain Zone (RFSS) and sites within a zone.

So as with some of the TG's they are allowed to broadcast on their specific sites ie. Huffman, IAH, Beltway Simulcast, and Ames. But not able to broadcast on Montgomery Simulcast, East Walker, Moss Hill, or any sites in Zones 2 & 3.

Radio ID's can be restricted the same way.

Sent: Friday, January 25, 2013 17:13
To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] 2318

RFSS 3. When you look at the TxWARN digital system page on Radioreference you'll see RFSS numbers next to the site numbers. RFSS 1 and 2 are the "county" system and carry HCSO, constables, Metro, and all the "county system" users. RFSS 3 is the new "City" system and carries Houston city traffic along with the new users who joined with them (Bellaire, the Villages, etc.) Talkgroups and radios don't roam between 1/2 and 3 aside from a handful of interop channels. In all actuality you're dealing with 2 separate systems that just happen to share a SID and WACN.

On Thu, Jan 17, 2013 at 3:48 PM, Kevin Chessher <kchessher@...> wrote:

New U1.8 firmware is available for the PSR-800, via the EZ Scan Digital software update feature.

Version U1.8 - January 15, 2013
Added ability to decode APCO Project 25 Phase 2 TDMA voice channels. This version must only be used in conjunction with DSP firmware version U1.3 or later.

When this version is installed, the uP Appl Ver line on the version screen (accessed by pressing the MENU when the welcome message is displayed after a power up) will show as version 1.8.

When a Phase 2 talkgroup is active, the scanner will display "D2" instead of "DG".

We recommend ensuring the sites on a P25 Phase 2 system be set to Auto-Fill mode. This will allow the scanner to automatically set the information needed to track the system from the control channel data stream. Don't use "custom tables" for Phase 2 systems unless you really know what you're doing.

Added support for decoding of radio ID and priority channel detection since the release of Beta 2.

Fixed issue in the Beta 2 versions with the scanner not returning to the control channel when a Phase 2 transmission ends when the other time slot is in use on the same frequency.

27657. NASA 928

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-01-28 02:52:37 UTC
From: Eric C. Carlson
Topic: 27657 Message: 27657

NASA 928 was up on 230.5 on 1/25 and 1/26 testing a camera system. At one point he was tracking the vomit comet. I also heard the callsign "Duster" used.

Anyone monitored or know why there are groups of military helicopters (MD 500 Defenders & Bell Kiowa Scouts) in the area this afternoon? I've seen them 2 times in the Galleria area. It's a bit unusual as these types are not stationed around here ......

NORAD jets practice for Super Bowl security
Posted: 01/28/2013 03:31:21 PM MST
Updated: 01/28/2013 03:36:25 PM MST
The Associated Press
PETERSON AIR FORCE BASE, Colo.—North American Aerospace Defense Command fighter jets are preparing their security precautions for the Super Bowl.

NORAD said Monday the fighters plan a one-hour drill over New Orleans on Tuesday starting at 7 a.m. local time.

If the weather is bad, the exercise will take place Wednesday.

NORAD, based at Peterson Air Force Base, Colo., is a joint U.S.-Canada command responsible for defending the skies over both countries as well as monitoring approaches by sea.

From: Eric C. Carlson
Topic: 27658 Message: 27670

That seems like quite a drill to try to keep secret in the middle of a large city.

Amazingly, I actually got a tiny bit of traffic related to this but certainly not all of it.
123.55 air-to-air, talking about "this training event" and complaining that it was on TV and recorded, they would discuss further on the ground.

Also, a new frequency for me that I got hits on today is 142.825 with what sounded like it may have been DES encryption. This had hits around the same time as Coast Guard "Swordfish 05" announcing itself on marine ch. 83A (157.175).

Interesting why they won't discuss it at all.

From: Eric C. Carlson <ecarlson@...>

Sent: Monday, January 28, 2013 7:14 PM
Subject: Re: [HoustonScan] Unusual Helicopter Activity

That seems like quite a drill to try to keep secret in the middle of a large city.

Amazingly, I actually got a tiny bit of traffic related to this but certainly not all of it.
123.55 air-to-air, talking about "this training event" and complaining that it was on TV and recorded, they would discuss further on the ground.

Also, a new frequency for me that I got hits on today is 142.825 with what sounded like it may have been DES encryption. This had hits around the same time as Coast Guard "Swordfish 05" announcing itself on marine ch. 83A (157.175).

Nowhere near as bad, though it sounds awkward in P25 like they all do.
Conroe FD is also running it.

I heard some helicopters near Ellington (Hwy 3 near the Beltway) Monday afternoon but I hear helicopters almost every day.

Didn’t even bother going outside to see what was going on.

Noticed it sounded like it was hovering over the area awhile like a news helicopter or police helicopter would.

I hear them all the time on mine. When conditions are right I hear them
from all over the state.

Anything on 142.825? That was active the night of the first helicopter training. 141.625 is another possible from that night. These appeared to have digital encryption. I can't say if they're actually related to this training though.

From: Josh W.
Topic: 27691 Message: 27700

DPS doesn't use the VHF system in Galveston County anymore, they have transitioned to the TxWARN 700 digital system using the Texas City tower. You might still hear the dispatcher on 155.5125 or 159.0975 but the mobiles will all be on TxWARN.

Date: 2013-01-31 01:24:43 UTC
From: Myles Barkman
Topic: 27658 Message: 27701

Caught some National Guard Helos on 242.4 a couple of minutes ago.

Nothing on 142.825, 141.625 or 123.550.

Someone that can hear the Texas City or Galveston sites might listen to see if there is any mention of it as well.

Wonder if they would cancel due to the high winds. Winds are still up around 20mph down there.

Reports are it was cancelled:
http://www.galvestondailynews.com/news/local_news/article_fb01f102-6b56-11e2-96ed-001a4bcf6878.html

"The U.S. Army's plan to use the old Galveston County Jail for urban warfare training was canceled late Wednesday afternoon.
Calls and emails to the Army were not returned, but the county's Dudley Anderson, who coordinated the use of the facility with the Army, said the military was a bit "sensitive" to the publicity the training generated.
The Army and city of Houston Police Department took some heat on Monday for conducting exercises at an old school in a residential neighborhood without informing residents ahead of time.
The Daily News reported on the planned drills in Galveston in Wednesday's edition, but did not provide details of what the training would involve.
The Army also conducted training near the old P.H. Robinson power plant in Texas City on Wednesday afternoon.
Anderson said he did not know whether the Army would reschedule training at the jail facility.
He said the Army had used the facility.
Not all was a lost trip to the island, Anderson said. Military personnel were able to set up some scenarios at the jail during the day and worked on some drills before deciding to cancel the nighttime training.
The county leased the jail facility for $4,000 to a detachment from Fort Bragg, N.C., home of the Army's 1st Special Forces Operational Detachment, better known as Delta Force."

>

I don't have a Pro-164, but it is an analog-only receiver with 10 banks 1,000 channels, and 16-character alpha tagging. It also has Signal Stalker II.

The Pro-96 receives analog and digital, has 10 banks, 500 channels (plus V-folders), 12-character alpha tagging. I have one and use it primarily for digital non-trunked traffic.

Here are links to the Wiki for both radios:
http://wiki.radioreference.com/index.php/Pro-164
http://wiki.radioreference.com/index.php/Pro-96

The question is, which radio is best capable of receiving whatever it is you wish to monitor? If that includes the TxWARN system, the PSR-800 is the only choice and is now way overpriced due to its scarcity. I am waiting for a Uniden model with Phase 2. I hope this helps. . .

Are there any settings on the scanner that need to be made except downloading the channels?

The DPS talkgroups are all Phase 1 FDMA so it's pretty straightforward.

http://www.radioreference.com/apps/db/?sid=4563
You want the Texas City tower (RFSS 1 Site 17). There are two DPS Texas City talkgroups; one covers Galveston County and the other covers Brazoria County. You won't hurt anything by programming both of them.

I am getting Texas City here in SW Houston on my 600.

On a similar matter, what is the latest on HPD going TDMA? The last I saw here was that TDMA didn't work and they were back on UHF.

DPS doesn't use the VHF system in Galveston County anymore, they have transitioned to the TxWARN 700 digital system using the Texas City tower. You might still hear the dispatcher on 155.5125 or 159.0975 but the mobiles will all be on TxWARN.

I was told that all the radios need new firmware to work on TDMA. I have no clue how reliable that is though.

27712. Secret Service Code Names

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-01 03:46:50 UTC
From: Eric C. Carlson
Topic: 27712 Message: 27712

I haven't seen these Secret Service code names reported anywhere but they are in use in Houston for the Bush family.
Taillights - person or vehicle
Tadpole - possibly a location

These are in addition to the known code names of Transport (command post), Tranquility (Barbara Bush), Tracker (main vehicle) and Trailbreaker (advance team).

From: allanstern@...
Topic: 27713 Message: 27713

On 31 Jan I heard "NASA 900" arrive at the Shuttle Landing Facility. Via comms on Orlando's 132.65 and the SLF Tower's 128.55, they announced as a flight of four T-38s. I suppose they came here for the memorial to the astronauts lost in the Challenger tragedy.

Did anyone snag the T-38s' SBS/ADS-B information or otherwide know the tail numbers that arrived?

According to FlightAware, three T-38s departed the SLF today: NASA 955, NASA 961 & NASA 966. I am pretty sure that NASA 955 was one of those that arrived, but not certain.

Good deal! I guess they didn't compensate for the new system on the BDA there.

BTW, that's a scary roof to be on top of.

Yes; I read your SBS postings religiously, Nigel. That was the first place I looked. Perhaps another T-38 will depart SLF today and might be the fourth that had arrived.
Thanks,Nigel.

Al Stern Satellite Beach FL

Subject: NASA T-38s

On 31 Jan I heard "NASA 900" arrive at the Shuttle Landing Facility. Via comms on Orlando's 132.65 and the SLF Tower's 128.55, they announced as a flight of four T-38s. I suppose they came here for the memorial to the astronauts lost in the Challenger tragedy.

Did anyone snag the T-38s' SBS/ADS-B information or otherwide know the tail numbers that arrived?

According to FlightAware, three T-38s departed the SLF today: NASA 955, NASA 961 & NASA 966. I am pretty sure that NASA 955 was one of those that arrived, but not certain.

If you ever want to hear what's going on on my side of town, you can try http://98.198.185.159:8080/mp3. Of course it only when I don't have the radio with me, and you'll probably need VLC (or a Roku) to decode it.

If you don't want to give out your home IP address, or if it's dynamic,
then get a host name from dyndns.org and give that out.

27732. NBA All-Star Game

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-05 04:11:21 UTC
From: Eric C. Carlson
Topic: 10927 Message: 27732

The NBA All-Star Game will be at the Toyota Center on February 17.
Bearcom has a temporary license for numerous frequencies using a mix
of narrowband analog and TRBO.

From: cboone@...
Topic: 26022 Message: 27733

Its time to empty the storage place...

I cannot list all the equipment, antennas and cable here but will do so on my Earthlink home site and post that URL ASAP. In the meantime here is a partial listing of what is up for sale...EVERYTHING must go...or its off the scrap yard and I would hate to see that happen...like something you see, make an offer... Note MOST items will be PICKUP only in the Beaumont area. Some gear is capable of being mailed/shipped and will be noted (shipping charges are not included in the pricing). Also can meet you half way on shippable items if you prefer for a smaller costs.

Chris
WB5ITT

Heliax:
LOTS of 7/8 and 1/2 inch foam (LDF)...some have connectors already on it, others are cut ends...I DO have connectors also available but have not yet had a chance to inventory it all...I do know I have one run ~440 ft of 7/8 LDF and another run or two at 150+ ft. The 1/2 consists of various lengths...some regular 1/2in and other 1/2in Superflex and one run over 150 of 1/2in Plenum rated (Blue jacketed and legal for indoor runs in overhead suspended ceilings, etc without conduit). Pricing is ~$2.50/ft on the 7/8 in and $1.25 ft on LDF 1/2 and $1.5 on the Plenum rated 1/2in.
I also have ~500 ft of 1/2 in Aluminum CATV cable....works great at UHF even in 50ohm systems....on a reel and ready to be moved....will take $150 for the entire 75ohm spool. No connectors but they can be easy made from brass hardware parts and PL 259s/PL258s (Also commercial AL connectors available but they are $20 a piece)

Antennas:
A number of DB201 lowband ground planes (great for 6m)...Solid AL and DC grounded folded monopole vertical radiator. These things can take a direct lightning hit and keep on working.....currently on 47/48MHz so easy to trim up to the 6m band. $50 each
DB 408 UHF repeater antenna....in mint condition. $100
DB 420 UHF repeater antennas...in excellent shape $200
Also have a HF triband beam (Telex or Hygain)....I think its 5 element. Some minor parts are missing due to too many moves and iirc, it was missing one or two when I got it...they are still available from the manufacturer. I paid $175 for this antenna and never got a chance to put it in the air. $125
DB Products DB365 antenna clamps..galvanized HEAVY brackets..some are clean, others have some minor rust on them...spray some cold galvanize on them and they will be fine...2 brackets (1 pair) for $20 plus shipping..these are what commercial VHF/UHF antennas use.
60feet of Rohn 25G with guy wires/hardware and a Cushcraft A3 antenna....currently in NW Houston area...tower needs to be taken down by buyer. Includes rotor and coax to antenna. $300 for all of it.

Gear:
ICOM IC706MKII HF-2m mobile rig....have remote mount bracket, cable, etc....radio in excellent shape...also have optional 16 button DTMF mic. $500 for all plus shipping

Kenwood TKR-750V2 VHF rptr with internal power supply. Unit is currently programmed in the 2m band. can cover 136-174 iirc. Will program and tune to your requirements for additional $20. Asking $800 firm on this unit.

Have several Midland commercial radios (lowband, VHF and UHF)...Syntech Is, IIs and XTRs...various models, etc..will post the inventory ASAP..one model is the 70-530B UHF...can cover down to 430MHz, 80channel capable, and I can program them. 30-35W out and excellent rcvrs...can be used as 9600 baud packet rigs (direct FM models)...or link radios, dedicated packet rigs, etc. $25 plus shipping. They include mic, power cable and mobile underdash mount bracket.

Heathkit Warrior HF amplifier....4 811s....works great (it has been tested). Needs an external TR relay for use with transceivers...does about 1200 out with 100w drive. $300
National NC 300 with external spkr and converters for 6,2 and 220 MHz (which are rare and mount in the spkr enclosure) I have not had a chance to check it out..so $100 gets it as is.
Several GE MVP radios...UHF models and one 406-420 model. Can be duplexed in the box as a nice small rptr or can be modified for 9600 baud packet (have to make a minor mod on the exciter to FM it instead of using the normal PM input)
$25 each plus shipping
Have matching power supplies for the MVPs as well..not recommended for continuous duty..but fine for packet use, etc.
$20 plus shipping

Various other UHF/VHF gear (repeater parts, duplexers, amplifiers, etc) and antennas, etc...which will make it to the web site posting ASAP..Also have some non radio gear for sale such as some 3000VA UPSs....need new batteries and these are rack mount models....commercial grade...$300 each..will provide more info on the web site posting.

I probably have a lot more that needs to be posted (like the GE MSTR II UHF and VHF repeaters as well as a 100w VHF Micor station with PS)..also lots of mobile antennas (couple of Hustler HF as well as a number of VHF/UHF mobile antennas). Not looking for trades.....this stuff needs to go and I dont need other gear...

If you wish to pick up the weekend of the Orange hamfest, I can meet you..I am NOT attending the hamfest but will make time to meet you in Beaumont for gear pickup...Heliax pickup will be done at the storage site (I will provide directions).

All sales will be final. CASH preferred.....(or cashier's check or MO)....I have been burned by personal checks in the past...sorry

27734. VHF Astro Spectra

Yahoo group: HoustonScan (2012 — 2013)

From: speedrcr78
Topic: 27734 Message: 27734

Will an Astro Spectra work for DPS if it does not do 2.5 khz channel spacing?

Thanks in advance

From: Josh W.
Topic: 27734 Message: 27735

Most people will tell you no, but for monitoring purposes yes, it will work.
For 155.4675, enter 155.46875 (yes, it will take)
For 159.2175, enter 159.21875
For 155.4525, enter 155.455
For 154.7025, enter 154.705.
Everything else can be entered as-is. Note also that virtually all of
the A/B/C/D pairs are now repeated statewide and it isn't necessary to
monitor the mobile frequency anymore. But also note that around here the
VHF channels are mated with P25 talkgroups on 1A7, and if you're only
hearing half-conversations odds are the mobile unit is on 1A7.

27737. Trunking Question...

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-08 16:14:39 UTC
From: toby
Topic: 27737 Message: 27737

I have a silly amateur question. I have a Radio Shack Pro-106 scanner that I program with the GRE software and information downloaded from the radioreference website. For the TxWARN Motorola system it lists 26 possible sites and I'm not sure what to select or how many. Are all of the users/talkgroups broadcast from each of the sites so that I should just select the site nearest me and be able to hear anything I want on the entire network from that one site? Or should I select multiple sites in the areas near the agencies/groups I want to listen to?

Also, I've noticed that I don't hear anything at all from Texas DPS...could that mean the info I've downloaded is out of date, or have I not selected the correct site to receive them?

Thanks,
Toby

It would depend on where you are at to have the closest site selected. Dps doesent use TxWarn only the also use vhf. To beable to to hear a talkgroup u want it has to be affiliated with the site you are monitoring just because you don't hear anything on txwan dosent nessecarily mean it was programed wrong. Now on the analog side of txwarn u need to make sure the band tables are in that system as s well.

Thank you for the good info. I've been using scanners for 30 years and am still having a hard time wrapping my brain around the concept of having to type in more than just a frequency and be done with it, let alone the scanners my dad and granddad had that came already setup with the crystals we wanted, haha. So I consider myself a novice with todays technology and am amazed and confused by most of the conversations I read in this forum but want to educate myself about it all. How do I determine what site a talkgroup is affiliated with? And what are band tables on the analog side? I apologize for my ignorance and really do appreciate your patience and help...

>>Thank you for the good info. I've been using scanners for 30 years and am still having a hard time wrapping my brain around the concept of having to type in more than just a frequency and be done with it, let alone the scanners my dad and granddad had that came already setup with the crystals we wanted, haha. So I consider myself a novice with todays technology and am amazed and confused by most of the conversations I read in this forum but want to educate myself about it all. How do I determine what site a talkgroup is affiliated with? And what are band tables on the analog side? I apologize for my ignorance and really do appreciate your patience and help...

From: MylesB
Topic: 27744 Message: 27744

Explosion at a plant around Driftwood and Fairmont Pkwy in La Porte.
Shelter in place for vapor cloud. Pasadena FD on scene using PFD 2.
At work so haven't had much time to see what else is active but would expect CIMA, Harris Co Fire Marshal, Deer Park and La Porte.

27751. NORAD

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-10 17:19:34 UTC
From: Eric C. Carlson
Topic: 27751 Message: 27751

There was air-to-air activity on 271.0 (reported NORAD frequency) on 2/7 and they appeared to be conducting a training exercise. I had an aircraft that sounded like "CAP(?) 963" (unsure on the callsign) checking-in on UHF Guard 243.0.

From: Eric C. Carlson
Topic: 10927 Message: 27752

CSC has security for the All-Star Jam Session at the GRB starting
2/14. Try these for CSC:
461.1375 DCS 152 (used at 2006 NBA All-Star in Houston)
461.3875 DCS 152
461.4375 DCS 152
461.5125 DCS 152 (used at 2006 NBA All-Star in Houston)

5 Star has security at Toyota Center and should be on the Toyota
Center TRS. The license for the trunked system there was finally
updated for TRBO on 2/7:
http://wireless2.fcc.gov/UlsApp/UlsSearch/license.jsp?licKey=2560534
Other possibles for 5 Star:
http://www.radioreference.com/apps/db/?aid=6093

Discovery Green, GRB and Toyota Center frequencies:
http://www.radioreference.com/apps/db/?aid=1744

Downtown hotels:
http://www.radioreference.com/apps/db/?aid=1733

27765. Bearcat Scanner FreeScan Programming

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-12 22:44:12 UTC
From: jirwin313
Topic: 27765 Message: 27765

Hello all, new to the group. I wanted to share my Houston area FreeScan file so if anyone has the following scanners and needs help programming them let me know. FreeScan supports the following scanners.

SC230, BC246T, UBC3500XLT, BR330T, BCD396T, BC346XT, BCD396XT, BCT15X, BCD996XT, BCT15 and BCD996

You will need the FreeScan software and the scanner data cable to import and upload the frequencies to your scanners.

27780. Operation RADAR II - Florida's Statewide Interoperable Communications Exercise

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-13 03:13:36 UTC
From: RM
Topic: 27780 Message: 27780

Interesting info:

Florida Emergency Management has just concluded one of the largest statewide interoperable communications exercises in the country. Entitled “Operation RADAR II” the two day exercise had 109 communications teams participating from 52 locations scattered across Florida.

Information regarding the exercise along with exercise photos can be found at the exercise web site:

www.OperationRadar.org

27783. Houston Area Wide Amateur Radio Live Feed

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-13 22:17:16 UTC
From: jirwin313
Topic: 27783 Message: 27783

Hello everyone, hope your enjoying this beautiful day today!

I wanted to let you all know I setup a stream today that broadcasts all of the amateur radio repeaters within 75 miles give or take of my location. Pretty much every repeater within 75 miles or so of Houston.

The scanner is a BCT15X setup on a 10 second delay. So if there is no transmission for 10 seconds it will continue to scan for an active repeater transmission within the list.

You can listen online or on your iphone or other internet devices.

You can listen to the live feed online here. You will also find the full list of repeaters on the feed.
http://houstonscanner.blogspot.com/2013/02/houston-wide-amateur-radio-live-stream.html

27784. HPD SWAT call-out

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-14 00:49:06 UTC
From: Eric C. Carlson
Topic: 27784 Message: 27784

For the HPD SWAT call-out on Midwest/Citywide this evening, SWAT switched to Channel B16 on the new radios. This is probably a simplex channel.

Today and some from yesterday:
136.375 CBP, maybe unrelated but was active with some weak comms
161.205 [146.2] Amtrak Police
171.4375 [n 653] Federal Interop 2, testing radios indoors, canine meeting night of 2/12, command post at the GRB
271.0 NORAD air-to-air, conducting intercept simulations of multiple aircraft (using bogus N numbers) and included intercepting a simulated Delta Boeing 777 off its flight plan
350.025 CBP Blue 3, maybe unrelated but was active with some weak comms
410.8 [n 798] FPS Houston, officer calling out at GRB on 2/12 to assist with an event
This is not including all of the usual locally-used frequencies for ATFE, CBP, DEA, FBI, ICE, USCG, USPIS and USSS.

Possible Bearcom rentals (not confirmed but suspected NBA at GRB):
http://wireless2.fcc.gov/UlsApp/UlsSearch/license.jsp?licKey=3441888
451.7125 [TRBO] low power repeater?
452.1875 [TRBO] low power repeater?
456.8375 M [254.1]
456.2375 M [218.1]

27786. Site 15 on 2318

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-14 03:45:01 UTC
From: speedrcr78
Topic: 27786 Message: 27786

I have several radios that are programmed for this site I am having an issue with. The radio will receive perfectly then it will sound like squelch as I can best describe it. I cannot tell if it is just a certain voice channel as it does not do it all the time. The radio will be crystal clear then the squelching sound until the transmission is over and another voice channel is used. Don't know if anyone has noticed this or has any suggestions. Thanks in advance.

27787. Re: [HoustonScan] Site 15 on 2318

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-14 07:32:38 UTC
From: Josh W.
Topic: 27786 Message: 27787

It's a rebanding issue. The squelch noise you hear is when the
controller sends it to a rebanded 851-854 MHz voice channel that doesn't
match what's in its channel tables.

So are you having the same issue on site 15?

Thank You,

Rusty Caufield, KD5RXY

Subject: Re: [HoustonScan] Site 15 on 2318

It's a rebanding issue. The squelch noise you hear is when the controller sends it to a rebanded 851-854 MHz voice channel that doesn't match what's in its channel tables.

I cannot tell if it is just a certain voice channel as it does not do it all the time. The radio will be crystal clear then the squelching sound until the transmission is over and another voice channel is used. Don't know if anyone has noticed this or has any suggestions. Thanks in advance.

No the whole conversation, well inside the range, and they are real radios.
I will get some audio and post link since I know I am not describing it
properly.

Several questions...

1. Does this happen mid-conversation?
2. Where are you when it happens? As in possibly outside the intended
coverage footprint?
3. Are these real radios or scanners?

Hmm...I would tend to agree with Josh then.

Since they're real radios you could just take them to the county radio shop and have them...oh, I guess that wouldn't work...nevermind.

Ok people, you can check out your radios in Southwestern Harris County against scannercast.conchbbs.com. Any client works.

Yes for example the dispatch will start to talk then will be covered by
that. Then when the unit talks it will be fine.

I'm going to surmise it happens during a conversation, it sounds like another transmitter getting into the radio. Maybe an aircard or smartphone? Do you happen to have a cell phone "booster" in your truck? Did you just upgrade your phone?

I know this is hard to do, but turn it off for a while and see if the
issue clears. It sure sounds like something getting into the radio.

I'm guessing these aren't Motorola radios?

I know this is hard to do, but turn it off for a while and see if the issue
clears. It sure sounds like something getting into the radio.

I'm guessing these aren't Motorola radios?

27805. Re: [HoustonScan] Site 15 on 2318

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-14 22:32:10 UTC
From: Kevin Chessher
Topic: 27786 Message: 27805

And you're sure you're within the intended coverage footprint? MoCity
has several channels that are 12.5 KHz away from HISD and cause problems
outside the area.

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-14 22:44:12 UTC
From: gjhamilton@earthlink.net
Topic: 27786 Message: 27806

Im having problems at braeswood and 610 area which is still in area according to rr. I can hear n gessner there ok not great. Does n gessner not have any of the 12.5khz channels? The transmissions the are good on mo- city are perfect. The scanner misses so much I am having a hard time nailing down if its the same channel(s).

Connected by DROID on Verizon Wireless

27807. Re: [HoustonScan] Site 15 on 2318

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-14 22:50:08 UTC
From: Kevin Chessher
Topic: 27786 Message: 27807

I'd put money on HISD being the culprit at that location.

The RR map is just a circle someone makes up.

27808. Re: [HoustonScan] Site 15 on 2318

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-14 23:17:06 UTC
From: Kevin Chessher
Topic: 27786 Message: 27808

Next time it happens see if one of the below adjacent frequency pairs
are active...

HISD MoCity
852.6875 852.6750
853.4375 853.4500

On 2/14/2013 4:50 PM, Kevin Chessher wrote:

Today:
123.325 appears to be an aircraft working downtown this evening
possibly talking to a TV truck
158.73 [162.2] DPS Executive Protection, car-to-car downtown
171.4375 [n 653] tonight this appears to be linked to 170.9375,
171.6125, 171.6875, 172.2125 and 172.2875 (all NAC 167 when monitored
in the past, 170.9375 is too weak to decode downtown), bomb techs/dogs
at Toyota Center
461.1375 [d 152] CSC
461.3875 [d 152] CSC
461.4375 [d 152] CSC

27829. Re: hpd changeover

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-15 23:50:22 UTC
From: Lou
Topic: 27757 Message: 27829

Let me add something to the mix here. Just a bit ago I had a chat with a CyFair ISD police officer. After chatting for a minute or two about them being commissioned officers now I found out that they have been using the CyFair ISD Security TG on 2318 (although of course he didn't know that ID) but they were changing on Monday. I said really, to what? He told me it would be the same system that HPD is moving to, then he said, "Not the county system mind you, but the new HPD one."

Okay, I wasn't going to get into a technical discussion with him about that but in any case CyFair ISD PD is moving to something "not the county system" on Monday. I am guessing they will be in there with Memorial City PD, etc. on the TDMA system so we should probably be looking for a new ID during school hours out our way (NW county area).

Oh, and that company who is overseeing this change (with a member or two in this Yahoo Group), you guys could end up with a law suit for discrimination; ...you know because of how you can make TDMA work for all the little agencies but not HPD or HFD. lol
8^)

Since the S/N ratio is already waaay up...

Maybe TDMA only doesn't work at 610 and Braeswood???

Actually I guess it would be the BER, not S/N.

27849. Antenna

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-16 16:47:47 UTC
From: toby
Topic: 6086 Message: 27849

I recently mounted an outdoor antenna (Radio Shack Model: 20-176). The advertised range says "Covers 108-1300MHz with peak performance occurring in the 152-470MHz range." But I've noticed that an area of the "peak performance" range is specifically what I cannot receive in. I first noticed it when I was unable to receive NOAA weather radio while connected to the outdoor antenna, but receive it clearly with the supplied antenna. I think I've narrowed it down to the VHF high range (I can't hear any aircraft either). I seem to have no problem receiving in the VHF low range (I hear CBs), and from somewhere in, if not all of the UHF Low and higher ranges (I receive HPD loud and clear). Is there anything that can be done to fix it or is it a bad antenna?

27850. Re: Antenna

Date: 2013-02-16 17:13:51 UTC
From: Barry Sherwood
Topic: 6086 Message: 27851

I have never used that antenna so cannot comment on it specifically. Make sure your coax is not shorted or an open circuit. Too long of a coax run can decrease signal levels @ the receiver also. Rg58/59 is very lossy @ vhf/uhf/shf.

It's the Radio Shack Moded: 20-176 "Outdoor VHF-Hi/UHF Scanner Antenna" and the coax is the RG-58/U 50 foot length with a TNC to BNC adapter....

Sounds like you may have a very strong VHF transmitter or even a FM radio station near you that causes the receiver to overload and not receive VHF.
When you use the inside ant the receiver is no longer overloaded and works normaly.
Sometimes turning on the ATT will help.
If this is the case you will need to make a trap for VHF, or you can buy one from Par Electronics.

You're almost certainly getting de-sensed from the antenna farm. You need some filters.

Yep ! I would try making a trap first.. You will need a BNC "T" and a poece of coax about 22 to 23 inches long with a BNC on one end and nothing on the other end.

I'm going to guess you have a R\S or GRE scanner. Try the attenuation setting and I bet it gets better. You will probably need to filter out the FM broadcast band.

123.325 is confirmed aircraft feeding video. They were up again last night. Listen for them again this weekend. I saw a helicopter circling around downtown 2 nights ago.

And, as Bill knows, the length will depend upon the velocity factor of the coax.

Also, one end of the tee has the stub, the other has the antenna or the coax from the antenna.

While I don't have one installed right now (indeed I have no outside antennas; HOA problems), I have used that particular antenna for years. In fact, I not only used it for scanning, but it was my go-to antenna for vhf/uhf ham use, as it had an acceptable SWR on both 2m and 70cm when I was traveling a lot and needed to be able to put up something semi-perminant. Indeed I bought a half dozen of them when they were still below $20 each. I will admit that it is not the greatest at the lower end of the aircraft band but works pretty well from 130 MHz and up as a receiving antenna.

As for your installation, 50ft of RG-58 is a terrible idea. And then using adapters mean you are losing RF by the bucketful. RG-58 on a 50 foot run (not counting connector loss) will cost you about 45% of the RF signal at 160 MHz.

27869. Antenna

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-16 18:27:58 UTC
From: Mark French
Topic: 6086 Message: 27869

I used to live in Fresno and I used a Grove scanner beam with RG 6 cable with a trap and along with the attenuator on a PRO 164 and had excellent reception on all frequencies.. I also used a 800 Mhz inside antenna for the trunk system for Missouri City and Pearland. using a second 164. I don't have any interference problems since I moved to Caldwell.

Actually yes, I personally would use the open-stub (the type of filter Bill means) as a troubleshooting tool. If it helps, you know a real notch filter will work for you.

Does anyone in the Bryan/College Station area have the scanner traffic from the fire last night? I had my scanner turned down and missed it.

Try pulling up the feed on radio reference in the archives.

Here is a link to instructions for making your own VHF trap

It suggests a section of copper water pipe but I'm going to try a soup can

That's a pretty good project, unfortunately if the FM braodcast band is
the culprit a narrow filter won't help much.

The filters from someone like PAR Electronics
<http://www.parelectronics.com/index.php> are actually 3 poles which
cover the complete band.

Here's the link for a open-stub (like was originally discussed)...

http://www.kyes.com/antenna/coaxfilter.html

I really wouldn't use this permanently as is also has notches at 3/4
wavelengths intervals, but if you cut one for the FM broadcast band and
it helps you can buy a better one.

You can start with something like one of these...

http://www.mcmelectronics.com/product/33-341

The notch on these isn't very deep and the rolloff goes into the air
band, but it's cheap.

If you want the best consumer grade filter go for this one...

http://www.parelectronics.com/vhf-fm-specs.php

The owner Dale is awesome to deal with and can make you custom filters
if needed.

I'm a PAR filter junkie...but I can hear everything I want to.

Here is a list of velocuty factors for common coax..

http://www.nr6ca.org/vf.html

A cheap way to tune your open-stub is to tune to an unused VHF
frequency, with a R/S-GREscanner if the FM broadcast bad is causing
issues your "signal bars" will probably be full scale (even with no
signal). Start cutting the stub coax 1/4 inch at a time until the bars
go down to 1 one or even better none.

From: Ed
Topic: 6086 Message: 27880

Over the years all I have ever use is RG-6 or RG-6 Quad. I know it's different impedence but we are talking about a receiver and not a transmitter. It's much cheaper and also the frequencies that RG-6 carries is nearly identical to what is necessary for a scanner. I also use two Diamond D-130 Discone antennas with excellant results. Why would I want to overload the sensitive front end of a scanner??

From: Scott Royall
Topic: 3690 Message: 27926

Well, I'm not usually looking for "action," just relevance to where I am. That means 050 really pisses me off since it is close enough to be relevant, and sounds so bad.

Correct, at each CP (control point) where the road channel changes there will be a sign denoting the correct channel pair and dispatcher tone. On the Galveston line, you can see it just north of Richey across from the yellow Y sign which indicates the beginning of yard limits.

The Galveston bridge is owned by the state of Texas but maintained by BNSF. The bridge operator is a BNSF employee, and he monitors 72/72 and marine channel 16. In a sort-of similar arrangement the Neches River bridge in Beaumont is owned and maintained by KCS but also used by BNSF and UP. BNSF actually owns the old SP main east of Lafayette to New Orleans but has trackage rights over the UP Lafayette sub from Houston east.

KCS also has trackage rights over the UP from Beaumont east to Rosenberg where their property resumes. The line from Rosenberg south to Victoria was totally rebuilt from the ground up in 2007, as SP had abandoned and ripped out most of it prior to the 1996 merger. KCS also built a brand-new yard, intermodal terminal, and yard & crew offices in Kendleton off 59 just north of the Spur 541 split.

The southern leg of the old SP Galveston Sub paralleling SH 146 was abandoned in 1987 between Red Bluff Rd. and the plant in Texas City. Until the merger, SP had trackage rights over the UP Galveston Sub and maintained their own yard and office on the island. The line south from Strang Yard in La Porte to PolyOne is the Bayport Industrial Lead (which uses 86/86 iirc) and the leg north from the bridge through Texas City is the Texas City Industrial Lead. Industrial leads are not considered main line trackage and operate under different rules; for example, you can leave cars parked on the "main." Oddly enough, the brand new Bayport container terminal off Port Road does not have rail service.

My first guess would be HPD officers using Baofengs or some other
frequency-agile radio. Don't laugh, they're out there. I hear the de-key
tones occasionally on Citywide and Special Ops after an officer unkeys.

There is a BNSF document that has a lot of information on it. Search the Galveston Subdivision Somerville to Galveston road.. Click on Link.Gulf Division PDF Huntsville Newswire. I was unable to attach this to this email. Document is BNSF Timetable No. 6. Happy reading.

27948. Re: [HoustonScan] railroad listening

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-02-25 13:42:39 UTC
From: Rusty Caufield
Topic: 27930 Message: 27948

The UP offices in Spring has the dispatch office for this UP/SP region (Texas/West Louisiana). Also it is the only UP dispatch office I'm aware that has not been consolidated into the UP national dispatch center in Omaha.
Go Texas!

Thank You,

Rusty Caufield, KD5RXY
Cypress, TX

>
> Correct, at each CP (control point) where the road channel changes there will be a sign denoting the correct channel pair and dispatcher tone. On the Galveston line, you can see it just north of Richey across from the yellow Y sign which indicates the beginning of yard limits.
>
> The Galveston bridge is owned by the state of Texas but maintained by BNSF. The bridge operator is a BNSF employee, and he monitors 72/72 and marine channel 16. In a sort-of similar arrangement the Neches River bridge in Beaumont is owned and maintained by KCS but also used by BNSF and UP. BNSF actually owns the old SP main east of Lafayette to New Orleans but has trackage rights over the UP Lafayette sub from Houston east.
>
> KCS also has trackage rights over the UP from Beaumont east to Rosenberg where their property resumes. The line from Rosenberg south to Victoria was totally rebuilt from the ground up in 2007, as SP had abandoned and ripped out most of it prior to the 1996 merger. KCS also built a brand-new yard, intermodal terminal, and yard & crew offices in Kendleton off 59 just north of the Spur 541 split.

>
> The southern leg of the old SP Galveston Sub paralleling SH 146 was abandoned in 1987 between Red Bluff Rd. and the plant in Texas City. Until the merger, SP had trackage rights over the UP Galveston Sub and maintained their own yard and office on the island. The line south from Strang Yard in La Porte to PolyOne is the Bayport Industrial Lead (which uses 86/86 iirc) and the leg north from the bridge through Texas City is the Texas City Industrial Lead. Industrial leads are not considered main line trackage and operate under different rules; for example, you can leave cars parked on the "main." Oddly enough, the brand new Bayport container terminal off Port Road does not have rail service.

Subject: Re: [HoustonScan] 465.225 DCS 703

My first guess would be HPD officers using Baofengs or some other frequency-agile radio. Don't laugh, they're out there. I hear the de-key tones occasionally on Citywide and Special Ops after an officer unkeys.

Date: 2013-02-27 05:00:56 UTC
From: Eric C. Carlson
Topic: 27954 Message: 27954

I heard a new unit working with Charlie-100 on 165.2375 [100.0] CBP Net-1 Houston today: CGA0260 (Charlie Golf Alpha 0 2 6 0). He was running a license plate for registered owner. Any ideas on this unit identifier? I've also heard many times in Houston on various CBP Nets the unit Texas RRB0027; is this Railroad Retirement Board Office of Inspector General?

According to Wikipedia (grain of salt added), they state that "Aerosim will no longer operate in Houston Tx."

http://en.wikipedia.org/wiki/Aerosim_Flight_Academy

Their pilot training website mentions nothing about Houston.
http://www.aerosim.com/academy/pilot-training

Wondering if it might be Flying Tigers. Some of the planes mentioned here were the ones flying earlier.

From: Kevin Chessher
Topic: 27975 Message: 27975

Found instructions to build cheapie tri-band scanner antenna, so I put one together. It's works surprisingly well and if you have a good parts box it probably won't cost much, if anything. I chose to use a N-type chassis mount as opposed to the SO-239 simply because that's what I had.

http://www.qsl.net/n4yek/scanner/antenna.pdf

If anyone else tries it report back with your results.

Cannot decode the ClosedSky system on 855.9125.

Time to do some spring cleaning and take out City of Houston system 2221 and Centerpoint 000C.

Who is next?

Based on what you heard it seems like it is Flying Tigers. Aerosim still lists a "Houston Campus" (Ellington) location on its contact web page but I'm not familiar with what if anything they're doing in Houston.

Helos are units 6520 and 6603.

One of them just gave instructions to boat in water on what to do when they drop the swimmer in the water and lower the basket.

Doesn't look like these guys are stationed around here:

http://www.helis.com/database/cn/27408/

http://www.helis.com/database/cn/10714/

Interesting that the form you fill out to request a static display, tour or flyover of a helicopter asks you if you have the capability of operating on Marine Ch.23A.

http://www.uscg.mil/d8/airstahouston/docs/StaticDisplayRequestForm.doc

Sounds kind of like a back channel.

Huh. I always thought they were on the Brazoria County side.
In any event, if they are a Fort Bend community then they are probably being dispatched by FBSO on either 2256 or 2384. Santa Fe *used* to dispatch Arcola VFD (never confirmed personally) so you might also try them for PD.

Arcola is dispatched by Fort Bend County Sheriff Office on 2384.east side channel. Arcola uses there own TG for talk around. The Fresno Fire Department serves Arcola and is dispatched on 3984 TG and.VHF 154.22Mhz.. Santa Fe is in Galveston County. Arcola is located on Hwy 6 and FM 521. I was a member of the Fresno VFD now living in Caldwell,TX.

From: Myles Barkman
Topic: 28008 Message: 28021

I think these are still being used by Galveston County agencies:

PL 136.5 Bacliff/San Leon FD Dispatch (using TG 50496)

PL 146.2 Dickinson FD Dispatch (using TG 49936)

PL 241.8 La Marque FD Dispatch (using TG 53904)

CSQ Santa Fe FD Dispatch (using TG 54544)

Don't know when they all do their pager tests or I could try confirming them easily.

Bacliff and Dickinson are confirmed. I didn't hear anything on either of the freqs you have listed for La Marque last time I was down that way (including this one), even while 53904 was active.

Dickinson does their pager test at 6:00 PM. Bacliff, La Marque, and Santa Fe don't do pager tests, unless it's in the wee hours of the morning. Texas City and Galveston still do their roll calls at 6:00 AM.

From: Myles Barkman
Topic: 28008 Message: 28024

Heard Santa Fe do their pager test at 6pm tonight. There was no PL tone.

Interesting thought that I think I heard Hitchcock later but was too weak to get any tone. Didn't know they were paging on 154.370. Thought they were still using their old freq of 154.355.

Subject: Re: [HoustonScan] Arcola PD

Bacliff and Dickinson are confirmed. I didn't hear anything on either of the freqs you have listed for La Marque last time I was down that way (including this one), even while 53904 was active.

Dickinson does their pager test at 6:00 PM. Bacliff, La Marque, and Santa Fe don't do pager tests, unless it's in the wee hours of the morning. Texas City and Galveston still do their roll calls at 6:00 AM.

On 3/13/2013 17:37, Myles Barkman wrote:

I think these are still being used by Galveston County agencies:

PL 136.5 Bacliff/San Leon FD Dispatch (using TG 50496)

PL 146.2 Dickinson FD Dispatch (using TG 49936)

PL 241.8 La Marque FD Dispatch (using TG 53904)

CSQ Santa Fe FD Dispatch (using TG 54544)

Don't know when they all do their pager tests or I could try confirming them easily.

To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] Arcola PD

Ehn.. Arcadia... Arcola... close enough.
Is the 154.37/CSQ paging link for Santa Fe still valid? I was never able to hear it.

On 3/10/2013 10:31 PM, Myles Barkman wrote:

This is the note I have in my TxWARN list for Santa Fe FD:

Santa Fe Fire 1 (also dispatches Arcadia) uses 154.370 MHz for dispatch

Being as Arcadia was absorbed by Santa Fe over 30 years ago, I think it's safe to remove it and avoid anymore confusion.

Huh. I always thought they were on the Brazoria County side.
In any event, if they are a Fort Bend community then they are probably being dispatched by FBSO on either 2256 or 2384. Santa Fe *used* to dispatch Arcola VFD (never confirmed personally) so you might also try them for PD.

On 3/10/2013 11:26 AM, toby wrote:

From: Lou
Topic: 28045 Message: 28045

I have been listening to some activity on TG HCSO Tac 3 most of the afternoon dealing with a search for someone (or a couple of folks) on or next to some water area. HCSO has a search craft out there and HPD has provided continuous helicopter coverage so far. They even swapped aircraft when one was running low on fuel. I think, based on what I have heard so far, it is the ending of a chase earlier that ended up with the actor(s) taking to the water. They have a vehicle but can't find the actor(s).

Does anyone have a clue what this started as? I cannot imagine it was something small considering the resources being expended to find the culprit(s).

Lou

This flag pole at a church near me looked strange and upon further inspection, I discover that it is a cleverly concealed T-Mobile cell phone antenna. I'm just guessing the church isn't just letting them use the space for free.

Locally both Sprint and T-Mobile use those solutions. It's not their first choice as you are limited to only 1 antenna per sector and that is typically a dual-pole cross-polarized style which doesn't have the best radiation pattern. They are a compromise between no site and at least having something.

It beats the heck out of those gawd-awful fake trees they use out west a lot.

Topic: 28051 Message: 28052

Due to the Chinese government forcing the closure of the factory used by GRE to produce the PSR-800, currently you may only be able to find second hand PSR-800s available. GRE is said to be working on getting production going with a new manufacturer. If you want to be able to monitor the new TDMA systems at the moment your only option is to pick up a PSR-800.

Date: 2013-03-22 16:31:56 UTC
From: Lou
Topic: 28054 Message: 28054

Guys, I realize that monitoring TDMA from the various simulcast sites is not the greatest as far as smooth decoding goes, but I find the Memorial Villages PD to be absolutely horrid.

I can hear the Memorial Village FD fairly clearly as well as Spring Branch ISD PD and various other in the clear TDMA signals, but for some reason the MemVlgPD is just pretty much unreadable most of the time.

Is it just me, or are others with PSR800s having similar issues with them?

Lou

From: Scott Royall
Topic: 28051 Message: 28056

I am already on record as saying my PSR-800 will be my final scanner. That's not because I expect it to last forever, but because I don't expect the things we tend to listen to the most to remain accessible forever. I'm not into conspiracies and I don't think there's one against scanner users. Rather, I simply think we don't add enough value for the people who actually use the radio systems (wrecker drivers notwithstanding) to offset the security issues associated with giving us access. I'm convinced the situation boils down to little more than that. Never mind the old chestnut of "if it goes through my body, I should be able to monitor it." Computing power is now ubiquitous, to the point where digitization is a given. It simply becomes less complicated and cheaper to build a digital radio system, and trying to provide public accessible is increasingly an extra expense of dubious value to the people buying the system. Again, I'm looking at scanning from the perspective of those behind the radio systems.

The PSR-800 is ok as a radio. Notice that I don't normally carry it with me because my use case is pretty unique. The PSR-800 doesn't have a keylock, and there isn't much room in this wheelchair. The radio gets bumped frequently when I carry it, and I've never had much success with GRE Service even before China screwed GRE. Since there's always a laptop on the chair anyway, I typically leave the scanner protected at home, and stream it over Scannercast.

I feel the same way, my PSR-800 will be my last scanner for the very reasons you think it'll be yours. As it is my county, Williamson, encrypts everything. So far Austin hasn't joined the bandwagon, but I'm certain they will.

Or even better go back to 155.595...and use horses and kerosene lanterns and black powder guns.

On 3/22/2013 11:37 AM, Aaron Siller wrote:

Sounds like they should have stayed on ltr

On Mar 22, 2013 11:32 AM, "Lou" <lou.maag@...> wrote:

Guys, I realize that monitoring TDMA from the various simulcast sites is not the greatest as far as smooth decoding goes, but I find the Memorial Villages PD to be absolutely horrid.

I can hear the Memorial Village FD fairly clearly as well as Spring Branch ISD PD and various other in the clear TDMA signals, but for some reason the MemVlgPD is just pretty much unreadable most of the time.

Is it just me, or are others with PSR800s having similar issues with them?

Lou

28064. TxWARN to LCRA patch

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-03-23 04:06:00 UTC
From: Josh Kaufman
Topic: 28064 Message: 28064

It looks like they were testing a patch between LCRA's P25 system and TxWARN today. I heard activity on GCI 1 and GCI 2 off of the Tyler Simulcast site. I guess they are getting ready for the MS-150 on April 21-22?

28068. ARLB007 FCC Grants ARRL's Request for Temporary Waiver for TDMA Systems

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-03-26 20:50:10 UTC
From: Myles Barkman
Topic: 28068 Message: 28068

Waiting for an amateur radio trunking TDMA rig that I can unlock so I can listen to HPD.

-Myles

SB QST @ ARL $ARLB007
ARLB007 FCC Grants ARRL's Request for Temporary Waiver for TDMA Systems

ZCZC AG07
QST de W1AW
ARRL Bulletin 7 ARLB007
From ARRL Headquarters
Newington CT March 26, 2013
To all radio amateurs

SB QST ARL ARLB007
ARLB007 FCC Grants ARRL's Request for Temporary Waiver for TDMA Systems

Acting upon a subsequent request by the ARRL, the FCC issued an Order (WT Docket No, 12-283) on March 25, granting a temporary waiver to transmit communications on amateur service channels above
30 MHz using single time-slot Time Division Multiple Access (TDMA) systems. The temporary waiver was granted pending the resolution of a related rulemaking proceeding (RM-11625). The waiver can be found in PDF format at, http://transition.fcc.gov/Daily_Releases/Daily_Business/2013/db0325/DA-13-542A1.pdf.

Currently, amateur stations currently are authorized to transmit messages using telephony and data emissions. The ARRL noted in its request that Amateur Radio Service licensees have recently established numerous narrowband repeater facilities using multiple time-slot TDMA repeaters and single-slot TDMA handheld digital transceivers in the 70 centimeter (420-450 MHz) band, but Part 97 as it currently stands does not permit amateur stations to transmit single-slot TDMA emissions on Amateur Radio Service channels above
30 MHz.

The FCC stated in its Order that the purpose of specifying emission designators for the Amateur Radio Service "is to relegate the transmission of certain inharmonious emission types to different segments of the frequency bands, while still allowing great flexibility in the types of emissions that may be transmitted by amateur stations." In granting the temporary waiver, the FCC agreed with the ARRL, noting that the digital systems that radio amateurs have recently implemented are "compatible with existing amateur repeater channelization plans."

The FCC also noted that allowing FXE and F7E as phone emissions and emission type FXD as a data emission "is unlikely to result in inharmonious emission types being used in the same segments of the frequency bands. We also conclude that allowing amateur stations to transmit these emission types is consistent with the basis and purpose of the amateur service, specifically to continue to contribute to the advancement of the radio art. We conclude that good cause has been shown for temporary waiver of Section 97.3(c)(5) to allow amateur stations to transmit emission types FXE and F7E as a phone emission and Section 97.307(f)(8) to allow amateur stations to transmit emission type FXD as a data emission. We therefore waive these rules accordingly, conditioned on the outcome of the pending rulemaking proceeding."

28083. Turkish Economy Minister

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-04-03 01:07:17 UTC
From: Eric C. Carlson
Topic: 28083 Message: 28083

The Turkish Economy Minister was in town yesterday and today for activities around the launch of the new nonstop flight to Istanbul. He is off to Austin for meetings tomorrow. HPD operations were on 460.4. There was almost nothing from DSS but there was some brief voice on 409.525 NAC 293 which might have been simplex.

Not related to this but I have recently heard possible DSS on the new Agent 3 frequency (per MT Fed Files) of 413.1 with NAC 293 simplex. The old simplex agent channels of 407.6 NAC 0F0 and 408.6 NAC 293 have been silent for me since 10/2012 and 4/2011 respectively. 407.6 NAC 0F0 was used regularly at the Passport Agency Office downtown. 408.6 activity was much more rare.

New "agent" channels to check:
412.8250 - Agent 5 (note that this is a federal itinerant frequency)
412.8625 - Agent 6 (note that this is a federal itinerant frequency)
413.1000 - Agent 3
413.1250 - Agent 4
413.6375 - Agent 1
413.8375 - Agent 2

-Eric

28084. FPS 410.8 NAC 798

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-04-03 01:29:43 UTC
From: Eric C. Carlson
Topic: 28084 Message: 28084

The Federal Protective Service on 410.8 NAC 798 repeater in Houston was doing a roll call today of all the security guard (7-George-5xx units) and verifying their unit IDs. This was the first time I noticed them using the 5xx series with the 7-George units. When I've heard them in the past they were just referred to as 7-George-xx (2-digit numbers). I also heard encryption on this channel for the first time. The dispatcher noted a few of the guards were responding "on an encrypted channel" and apparently was getting them to switch to the clear.

-Eric

From: Rudy
Topic: 20251 Message: 28087

Hi!
New member of the group today because of this entry!

I live near Jones Road and 1960, and I've been receiving this transmission on this frequency since I've lived here for 3 years.
I, too, will hear room numbers called out. Also, I will hear the words: front door, kitchen service, emergency, summerbrook hall, among a few others.
I can only conclude that it may be coming from a near-by hospital or some kind of retirement center housing complex.
If I can pinpoint the "summerbrook" meaning, it may narrow it down to where this signal is transmitting from.
I'll keep listening and any other info, I'll post. Take care!

28091. Last ditch effort to save having to send my 4-hour old HP-1 back

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-04-04 00:28:41 UTC
From: Rob
Topic: 28091 Message: 28091

I turned on my brand new HP-1. I entered my Zip Code 77546. Then I updated everything with Sentinel. Then I purchased and entered my Extreme registration.

The unit scans the TxWARN Analog system just great.

But when it scans to the TxWARN P25 system, it is deaf. Before you think it's something wrong with my (very simple) setup, it cannot be a setup problem (i.e., any problem with Location, Range, Service Types, etc.) because I can temporarily fix the problem:

All I have to do is go to Analyze, and analyze the system's signal strength or activity. As soon as I get 100% on the Analyze screen, or get some activity on the log, I can hit Listen, and it scans the TxWARN P25 system just great.

BUT as soon as it scans off of that system (or I manually Next away from it) and then it scans back (or I manually come back to it), it's back to being deaf. Until, of course, I do the Analyze trick again.

What am I doing wrong? Is my unit defective?

No, it isn't defective, I use mine every day. The key is that you cannot just let it decide what sites to listen to. You have to set up a favorites list and in that list remove all the layer 3 (RFSS 3) sites. Those are all Phase 2 sites and the HP-1 cannot do anything but sit on the CCh on those, unless some FDMA transmission happens, like parking enforcement or... well you get the idea.

I've set everything except Pearland to AVOID, but it still does the same thing. Doesn't that eliminate it being layer-3 / Phase-2 site-related?

It should, provided that the Pearland site is carrying traffic for the service groups you have enabled.

I suggest the following, I assume you know that it is actually getting the site, since you can do it in analyze mode, enable all service types and see if you hear anything at all.

Some site apparently was the problem. I deleted all of the Houston sites, but it still didn't work. Then I deleted every site except Pearland, League City, and Texas City, and it seems to work fine. I suppose if I was bored, I could delete them one at a time until it started to work. Odd that Avoiding everything but Pearland didn't fix this. Perhaps avoid has a bug.

I'll keep an eye on it for a while and report back.

I NEVER would have thought of this, Lou. Thanks for saving me a huge hassle!

Glad it is working for you now.

I still like using a favorites list (or several), it cuts down on the clutter of stuff to only that which I want to hear. 8^)

28098. Pro-164 / Pearland scanning

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-04-04 13:05:13 UTC
From: tx_arvee
Topic: 28098 Message: 28098

I have a pro164, and it has current firmware for rebanding. I have the software loaded and computer and scanner communicate ok. I have loaded the Pearland frequencies and talk groups. The table loaded as well. However, I am not receiving them. Other talk groups are coming through from somewhere on the beltway.

Any tips or knowledge someone can give a total noob are appreciated.

The tone is correct. I live here in Caldwell and there has been no change to the frequency or tone . The input freq is 154.13Mhz. All VFD in Burleson county are dispatched on 154.385Mhz and rarely .use the other listed freq on radioreference. The tones for the DPS and Beaver Creek Command are both 156.7.Mhz..

I'm getting a strong DMR (MotoTRBO) signal in Porter. That's south Montgomery County.

454.050 Mhz

It is probably a Part 22 paging FCC license so it does not show up on Radio Reference's FCC search.

Someone with DMR Decode may want to look into this.

Regards,
Rick

From: CenTexComm@yahoogroups.com [mailto:CenTexComm@yahoogroups.com] On Behalf Of Robert
Sent: Wednesday, April 10, 2013 7:58 PM
To: CenTexComm@yahoogroups.com
Subject: [CenTexComm] New helo to fight wildfires but what about pilots?

They bought a helicopter but the pilots will come from Starflight so not sure how that is going to work.

If you have a fire mission the pilot takes the fire chopper if you have a medic mission the pilot takes the medic chopper. Not sure how this would work. they don't exactly have a hanger full of pilots ready and waiting.
==========

Austin residents can rest a little easier once Travis County's new Star Flight helicopter arrives, outfitted specifically for fighting wildfires, an ever-present risk in the area's hilly, forested terrain.

Funded by bond purchases, the $2.2 million helicopter is classified as Star Flight 4 but won't be used for patient transport, only firefighting or disaster response, said Casey Ping, Travis County STAR Flight program director.

The aircraft, set to arrive around April 21, is a UH-1H or "Huey" that has been stripped down to its airframe and refurbished with tools, equipment and a water-carrying capacity that is nearly three times greater than the nonmodified models used to fight the 2011 Steiner Ranch wildfires, Ping said.

Currently, Star Flight helicopters can hold about 130 gallons of water and access a water source through a bucket hanging from its belly. Star Flight 4 will be able to hold up to 325 gallons of water which it can siphon through a hose, drawing the water into a container bolted to its undercarriage.

The hose method of drawing water is much safer for pilots, and the helicopter can get to places by air that ground crews can't access, Ping said. The aircraft will be kept in a hangar in East Austin and will support any fire department in Travis County and neighboring areas if available.

Star Flight 4 was originally manufactured by Bell and retrofitted by Northwest Helicopters in Olympia, Wash. Although similar helicopters are used by California fire departments, Travis County is the first area in

Texas to receive the specially equipped aircraft, Ping said.

Robert Abbott, Lake Travis Fire Rescue interim fire chief, said he is looking forward to having the new equipment as a firefighting option available to ESD No. 6.

"The helicopter is timely given our drought," Abbott said. "Having this as a resource going into the fire season will be a great, great tool. It makes the logistics of getting water into the aircraft safer and more efficient since it's specifically designed for that type of work. It will be a night-and-day difference with this aircraft."

From: markfrench2002
Topic: 28124 Message: 28124

This frequency 854.262 Mhz showed up on the Hempstead site TXWARN Motorola. Can someone confirm this as it is not listed on the Hempstead site. In search it is listed as Harris County I.T.C. I understand this is the name for the Harris County system management. The Hempstead site is the only one I can hear regularly on TXWARN.

You have to wonder about the media. CNN was reporting six hurt and no deaths. Fox was reporting four dead and dozens injured. They both revised their numbers once BPD put some out.

From: ~Bill
Topic: 28135 Message: 28149

Logan Airport is on a Ground Hold

Also there was a 3rd Explosion at the JFK Library [National Records and Archives] that the Local Officials are treating as related.

Numerous calls for susp packages on-going. EOD Teams are going to be tired tonight as they continue to detonate unattended bags [likely dropped by spectators running from the scene]

Roger that. Not that trunking would have helped much, it might have reduced the doubling is all. Of course that would frustrate individual officers to no end, but at least the one cleared to transmit wouldn't need to fight to be heard. More radio traffic might actually go through that way.

Just needling the local anti-trunkers. J

So TDMA DOES work???

Awesome job on whoever figured that out!

To listen to HPD/HFD do i have to program the county sites also? or just the city ones?

Thanks,
Marvin

So TDMA DOES work???

Awesome job on whoever figured that out!

And tacs per former A1 or tac1 which ever you're use too are now called AD
so there is the giveaway and the automated dispatch sounds worse it was
better a couple of days ago

Thanks,

28221. Re: [HoustonScan] City of Houston Official Radio System Change!!!!

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-04-27 13:53:12 UTC
From: Josh W.
Topic: 28118 Message: 28221

The UHF system experienced some kind of catastrophic failure in the
middle of the night, so they went ahead and flipped the switch. It may
be temporary until UHF gets sorted out or it may be permanent.

Yes, I'm told there was an equipment failure at 1 Shell that could not be resolved quickly so they went ahead and cut over.

> **********
> Just a bit of additional information on this. The Houston Fire Department switched off the UHF Analog at about 2:00 AM local and are now operating strictly on the TxWARN P25 (http://www.radioreference.com/apps/db/?sid=4563) layer 3 channels only. In other words, all TDMA. So far no one has found any FDMA simulcast of the HFD channels. It is unclear at this time if the UHF system will go back on the air at all as it had a failure sometime last night dictating an early change.

28225. RE: [HoustonScan] City of Houston Official Radio System Change!!!!

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-04-27 19:04:46 UTC
From: Myles Barkman
Topic: 28118 Message: 28225

Hearing HFD dispatch on UHF and it appears a little weaker than normal. Might be from a backup site. Robot dispatcher sounds bad. Might as well use Charlie Brown's teacher.

Hear snippets of digital audio being patched from the trunk system.

LOL

Brian,

This was based on the information posted here on the list plus me doing a bit of monitoring on the system(s). I would say this is a lot like carrying coal to Newcastle.

Lou

28239. RE: [HoustonScan] Cy Fair 2 alarm fire

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-04-27 23:26:50 UTC
From: Myles Barkman
Topic: 28228 Message: 28239

Speaking of Cy-Fair, I heard them using TG 1804 on the P25 system Thursday afternoon. From the delay of audio, I would say it was being patched from the UHF to the P25 TG.

Heard it on the 052 simulcast site.

Subject: Re: [HoustonScan] City of Houston Official Radio System Change!!!!

FDMA on 1A7 Zone 3 site 5 (PW site, AKA TCBC)...

40002 HFD Disp
40018 HFD NE
40038 HFD SE
40058 HFD NW
40078 HFD SW

Enjoy!!

From: Scott Royall
Topic: 28118 Message: 28257

Well, you can feast on scannercast.conchbbs.com for now.

Even the FDMA patches are more readable than the old UHF crap. (Notice that I didn't say it was clearer.)

True, in TDMA. Not everyone has a TDMA scanner.

Which is why I posted about the FDMA TG's.

Not sure why you hated to say that though.

My radio is legal. Straight from /\/\.

Trying to scan the local trunked channels on simplex rx scan and filter out the TGs in a scan list. Apparently I am too old to figure this out. Need to get my 10 year old to figure it out.

28267. Outlook 2007

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-04-28 01:38:48 UTC
From: Myles Barkman
Topic: 28267 Message: 28267

Guess the power went out a few too many times while I had the computer on. My .pst file got corrupted and I can't run Outlook until I get it fixed. Never done this before. Just did the repair and am about to try to recover the repaired items. I was just putting the UPS back on the computer to keep it from shutting down too. What a headache!

28287. International Festival

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-04-30 00:50:17 UTC
From: Eric C. Carlson
Topic: 2259 Message: 28287

iFest used new frequencies (for them) this year:
http://wiki.radioreference.com/index.php/Houston_International_Festival#2013

There is some overlap with frequencies heard at other events (e.g.,
Komen Race for the Cure 2007/2010/2012, Free Press Summer Fest 2012,
Freedom over Texas 2012).

From: <hishy@...>
Topic: 28288 Message: 28295

Definitely still active on 453.85/146.2, though the repeater has occasional issues with intermod.

You can actually monitor all of the fire departments in north Brazoria County on VHF/UHF without needing a 800 trunking scanner. Alvin multicasts on 452.85/100.0, and everyone else (Iowa Colony, Manvel, Brookside, County Road 143) is primary on UHF. The P25 channels on TxWARN are, for the time being, just chit-chat channels.

Angleton is primary on 155.8125/100.0.
